# 1 Introduction

The Customer Service module (CSM) in ARCRM handles the complete after-sales service cycle: logging customer complaints as tickets, assigning service engineers, scheduling and completing field visits, checking warranty and AMC entitlement, recording engineer attendance, and analysing service performance.

## Who this manual is for

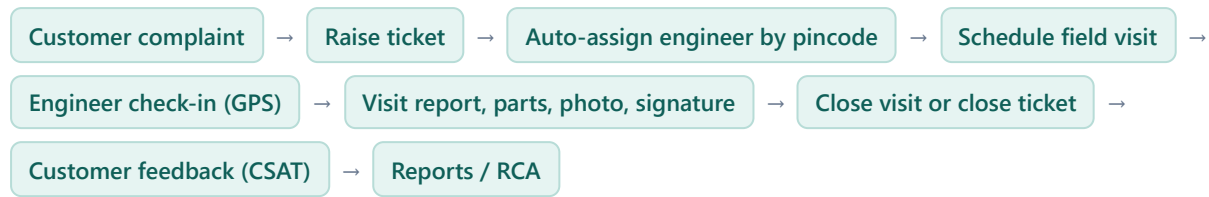

| Role                              | Typical use                                                                                       |
|-----------------------------------|---------------------------------------------------------------------------------------------------|
| <b>Service desk / coordinator</b> | Raise tickets, assign engineers, schedule visits, follow up on SLA.                               |
| <b>Service engineer</b>           | Work on assigned tickets, check in and out of visits, mark daily field attendance, close tickets. |
| <b>Service manager</b>            | Monitor the dashboard and reports, reassign or escalate, prepare Root Cause Analysis (RCA).       |
| <b>Administrator</b>              | Configure categories, priorities, SLA, sources, teams, engineer territories and user permissions. |

## Module map

All screens are under **Customer Service** in the left-hand menu.

| Menu item                 | What it does                                                                           | Chapter |
|---------------------------|----------------------------------------------------------------------------------------|---------|
| <b>CSM Dashboard</b>      | Live KPIs, SLA compliance, ticket charts, top engineers.                               | 3       |
| <b>Tickets Register</b>   | All support tickets, with My Tickets and My Team Tickets views.                        | 4 – 7   |
| <b>Service Visits</b>     | Field visit queue, check-in, visit report and check-out.                               | 8       |
| <b>Field Attendance</b>   | Daily engineer check-in / check-out with GPS and selfie.                               | 9       |
| <b>Visit Planner</b>      | Calendar of all scheduled field visits.                                                | 10      |
| <b>Warranty &amp; AMC</b> | Warranty and AMC registers, coverage check, bulk import.                               | 11      |
| <b>Knowledge Base</b>     | Troubleshooting articles and FAQs.                                                     | 12      |
| <b>CSM Config</b>         | Masters: categories, types, priorities & SLA, sources, designations, teams, engineers. | 13      |
| <b>Service Reports</b>    | Ten analytical reports with CSV export.                                                | 14      |
| <b>RCA Report</b>         | 5-Why root cause analysis and CAPA register.                                           | 15      |

## The service process at a glance

SLA timers start when the ticket is created and are driven by the ticket's **priority**. The dashboard and reports show response and resolution compliance against these targets.

## 2 Getting started

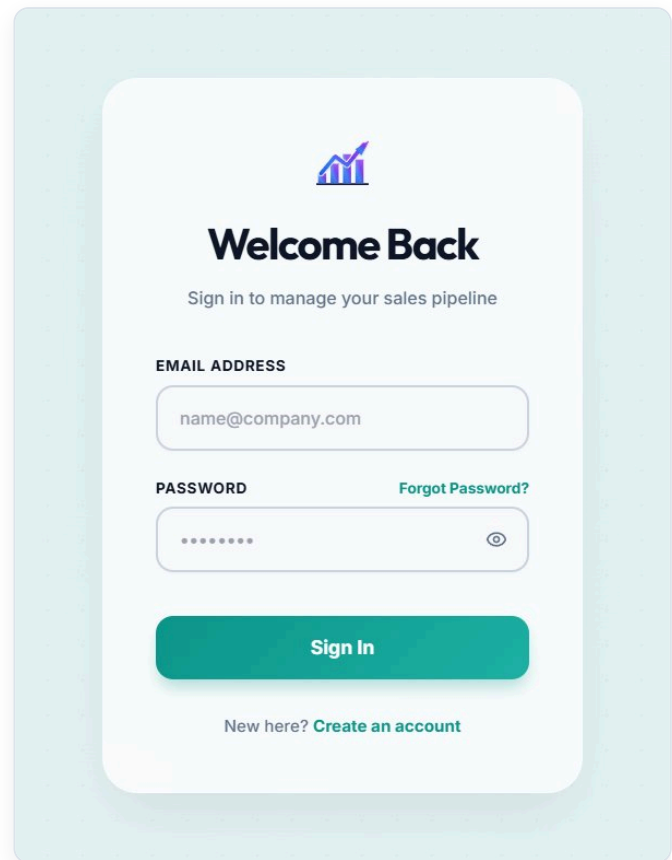

### Signing in

- 1 Open ARCRM in your browser.
- 2 Enter your **Email Address** and **Password**.
- 3 Click **Sign In**.
- 4 In the left menu, expand **Customer Service** and choose a screen.

If you forget your password, click **Forgot Password?** to receive a reset link by email.

#### NOTE

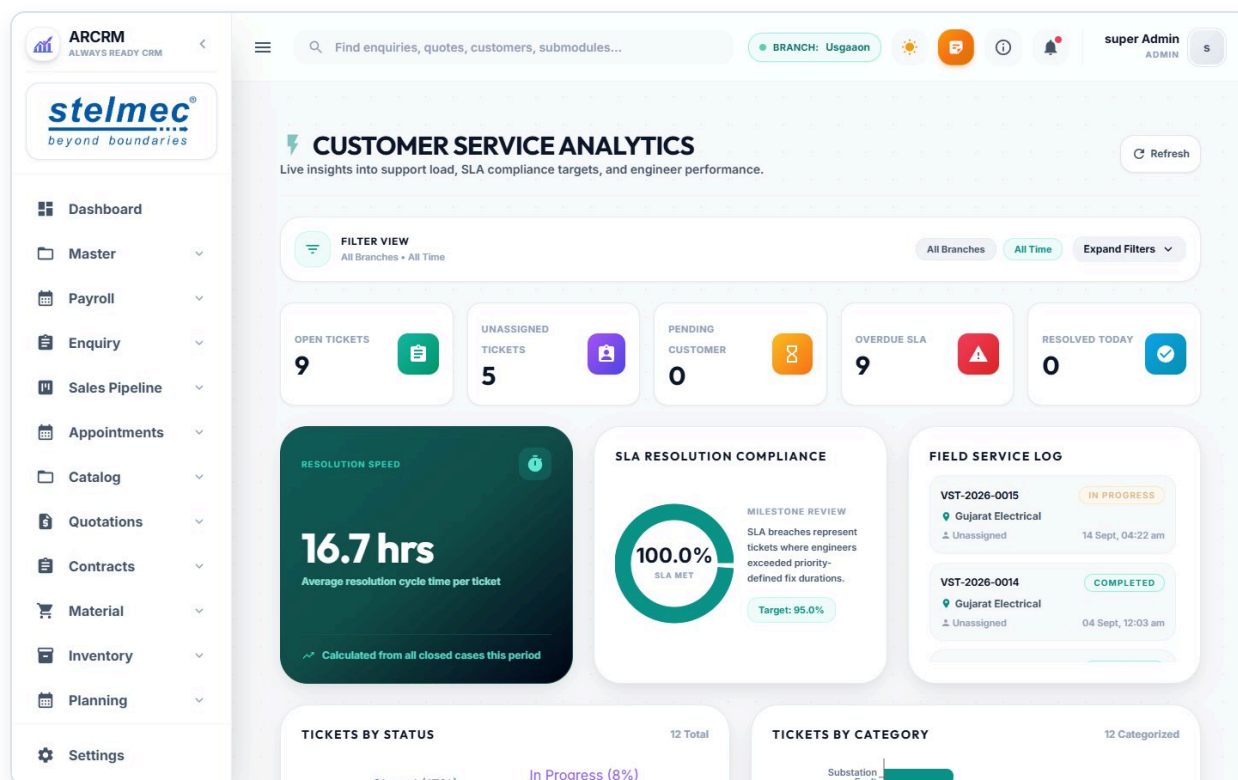

You only see the Customer Service screens your administrator has granted to you. If a menu item is missing, ask your administrator to enable it (see Chapter 16).

The screenshot shows a clean, modern sign-in interface. At the top, there's a small bar chart icon. Below it, the heading 'Welcome Back' is prominent, followed by the instruction 'Sign in to manage your sales pipeline'. The form consists of two main sections: 'EMAIL ADDRESS' and 'PASSWORD'. The email field contains the placeholder 'name@company.com'. The password field is masked with dots and includes a 'Forgot Password?' link to its right. A large, rounded green button labeled 'Sign In' is positioned below the password field. At the very bottom, there's a link that says 'New here? Create an account'.

Figure 1. ARCRM sign-in screen.

## Screen layout and common controls

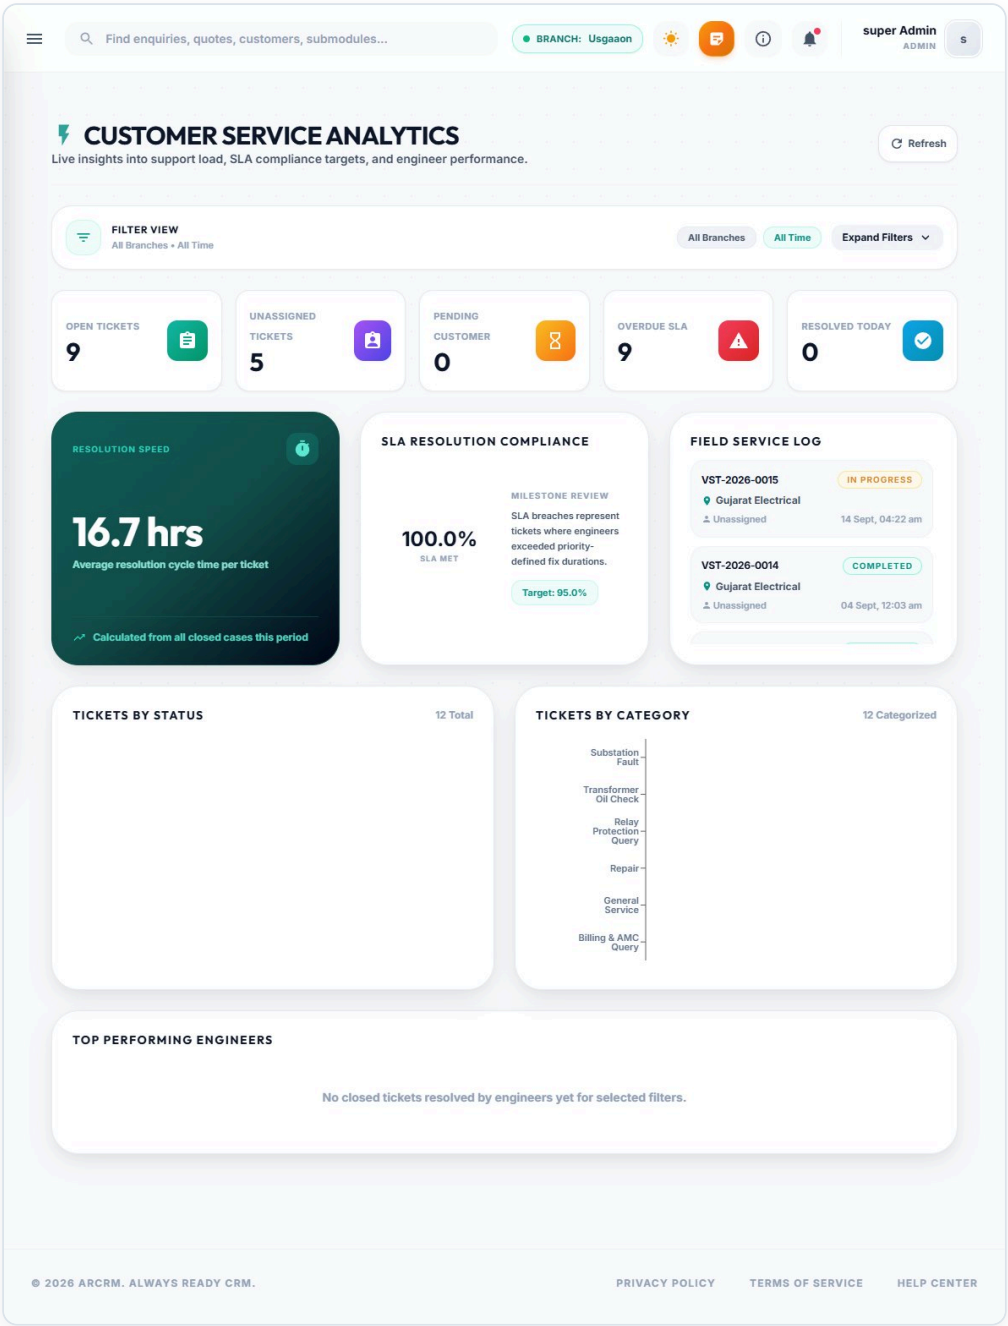

**Figure 2.** The ARCRM workspace: menu on the left, global search and the branch indicator at the top, and the page content in the centre.

- **Global search** (top bar): type a screen or record name, for example "RCA" or "service reports", to jump straight to it.
- **Branch indicator:** shows your active branch. Users who are not admins only see tickets for their own branches.
- **Searchable drop-downs:** click the field, then type in the *Type to search...* box to filter long lists.
- **+ Quick Add** links next to some fields let you add a missing master value (source, designation, priority, problem) without leaving the form.
- Buttons and headings are shown in capitals on screen. This manual writes them in normal case, for example **New Ticket**.

### 3 CSM Dashboard

The dashboard ("Customer Service Analytics") gives a live picture of support load, SLA compliance and engineer performance. Click **Refresh** at the top right to reload the figures.

**Figure 3.** CSM Dashboard: KPI cards, resolution speed, SLA compliance, field service log and ticket charts.

#### KPI cards

Each card is clickable and opens the Tickets Register already filtered to the tickets it counts.

| Card         | What it counts                                   |
|--------------|--------------------------------------------------|
| Open Tickets | Tickets in status Open, Assigned or In Progress. |

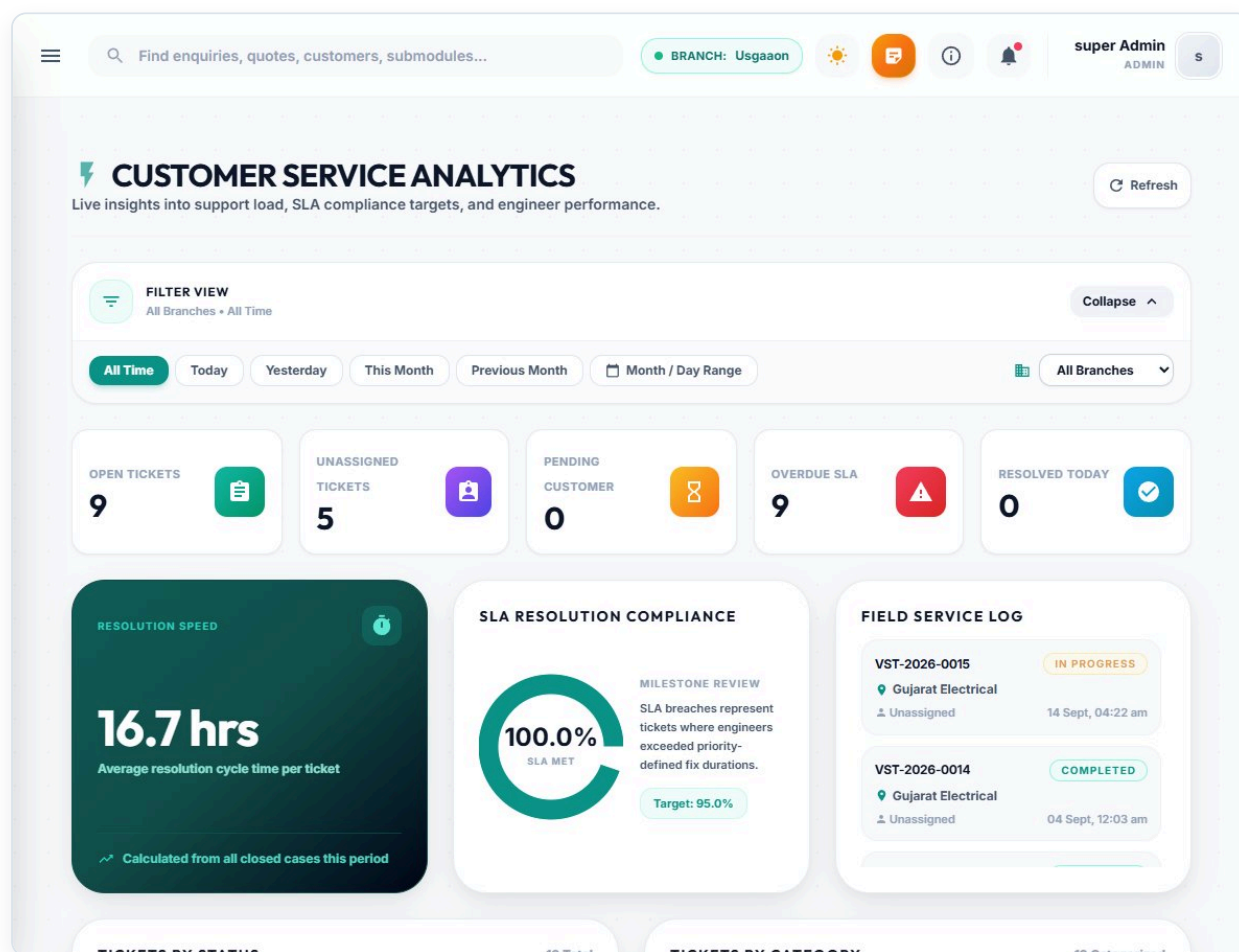

| Card               | What it counts                                                           |
|--------------------|--------------------------------------------------------------------------|
| Unassigned Tickets | Tickets that are not resolved, closed or cancelled and have no engineer. |
| Pending Customer   | Tickets waiting for the customer.                                        |
| Overdue SLA        | Unresolved tickets that are past their resolution due time.              |
| Resolved Today     | Tickets resolved since midnight today.                                   |

## Panels and charts

- **Resolution Speed:** average hours from ticket creation to resolution.
- **SLA Resolution Compliance:** percentage of tickets resolved within SLA, against a 95% target.
- **Field Service Log:** the five most recent field visits, with status, customer, engineer and date.
- **Tickets by Status** (pie chart) and **Tickets by Category** (bar chart). Tickets without a category appear as "General Service".
- **Top Performing Engineers:** the top five engineers by tickets resolved, with average CSAT score.

## Filtering the dashboard

Click **Expand Filters** on the **Filter View** bar to narrow the figures by period and branch. An **Active** badge and a summary line (for example "All Branches • All Time") show what is applied, and **Reset** clears it.

**Figure 4.** Dashboard filter presets: All Time, Today, Yesterday, This Month, Previous Month, and Month / Day Range.

With **Month / Day Range** you can choose a month, a year and a from–to day range.

## 4 Tickets Register

The Support Tickets Register lists every customer service case. From here you create, search, export and import tickets, and open a ticket to work on it.

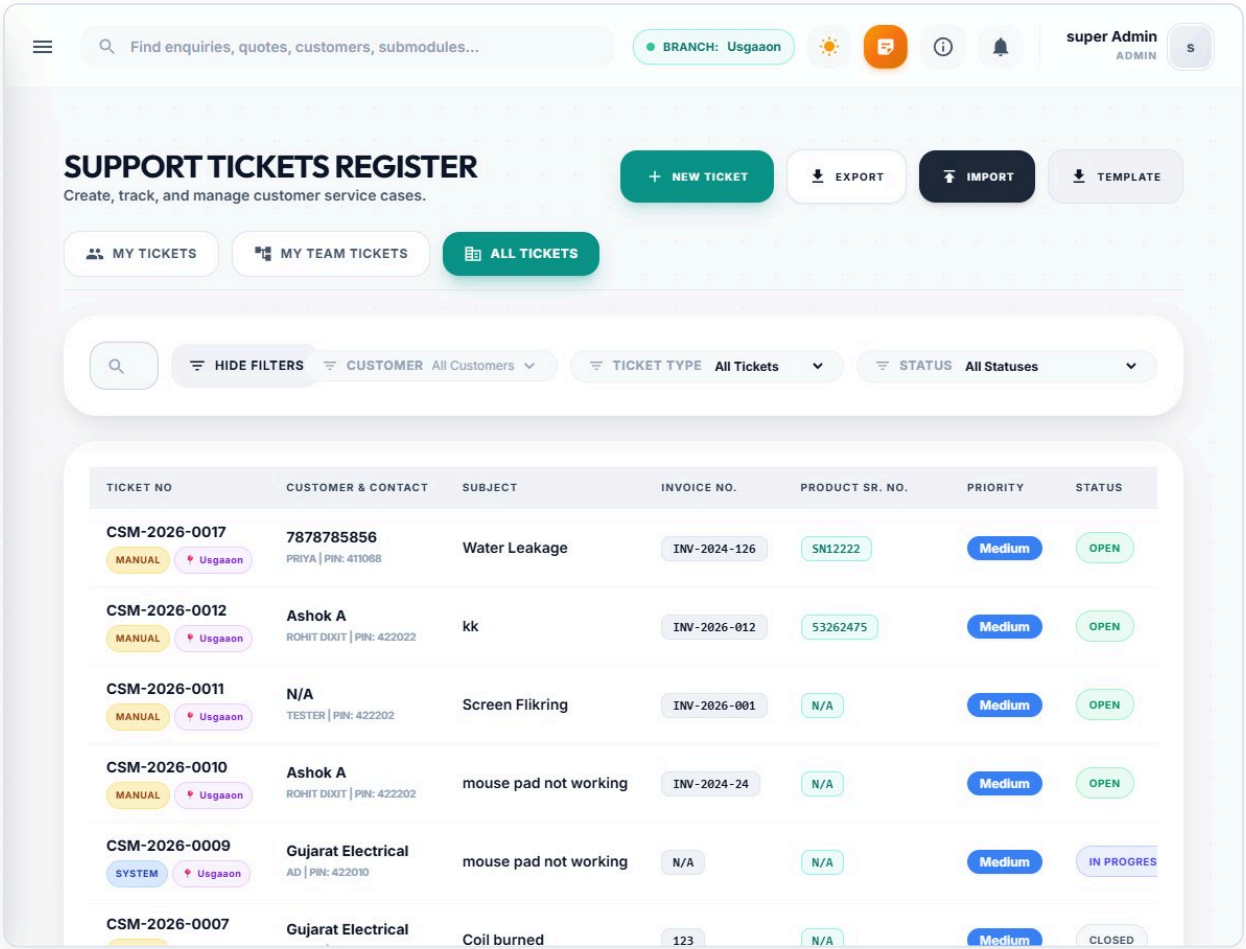

Figure 5. Support Tickets Register, All Tickets tab.

### Tabs: My, Team and All tickets

| Tab             | Shows                                                                                                                          |
|-----------------|--------------------------------------------------------------------------------------------------------------------------------|
| My Tickets      | Tickets you created, plus tickets assigned to you as service engineer or sales representative.                                 |
| My Team Tickets | The same, for everyone who reports to you (directly or indirectly) in the reporting hierarchy. Empty if nobody reports to you. |
| All Tickets     | Every ticket. Visible to administrators and managers only.                                                                     |

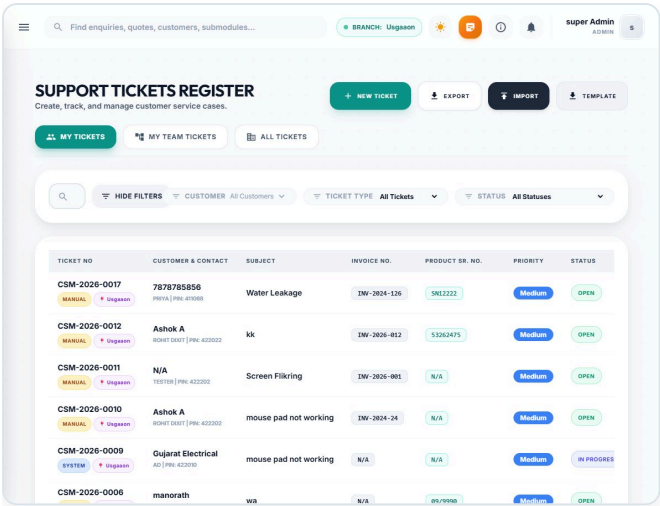

Figure 6. My Tickets.

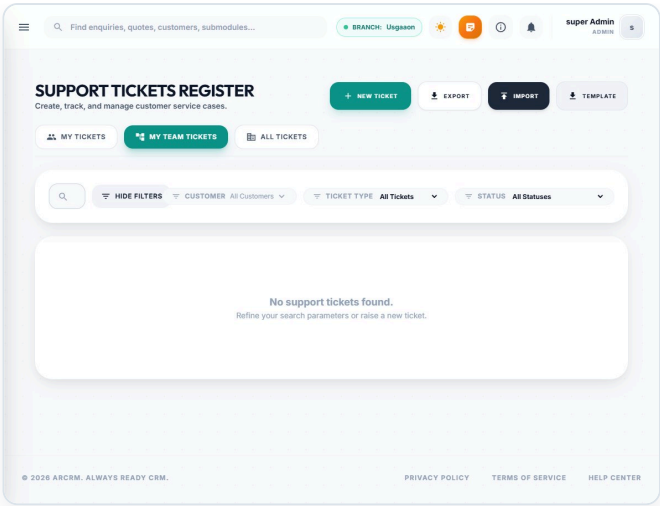

Figure 7. My Team Tickets (empty when you have no reportees).

Search and filters

- **Search box:** type a ticket number, subject or contact name and press Enter.
- **Hide Filters / Show Filters** toggles the filter row.
- **Customer:** only customers who have tickets are listed.
- **Branch:** shown when branches are set up.
- **Ticket Type:** All Tickets, System Tickets (standard form) or Manual Tickets (manual registration).
- **Status:** All Statuses, "Open Tickets (In Process)" (anything not closed, cancelled or resolved), or a single status.

Reading the ticket list

The list shows ten tickets per page. Columns: **Ticket No** (with a *Manual* or *System* badge and the branch), **Customer & Contact** (with pincode), **Subject**, **Invoice No.**, **Product Sr. No.**, **Priority**, **Status**, **Engineer** ("Unassigned" if none; also shows the sales representative), and **Action**.

TIP

To open a ticket, click **Details** in the Action column. Clicking elsewhere on the row does nothing. The list refreshes automatically when tickets change.

Export, import and template

| Button   | What it does                                                                                                                                 |
|----------|----------------------------------------------------------------------------------------------------------------------------------------------|
| Export   | Downloads <i>Support_Tickets_&lt;date&gt;.xlsx</i> (up to 10,000 rows). The export follows the search box, status and priority filters only. |
| Template | Downloads <i>ticket_import_template.xlsx</i> , a sample sheet with the correct import columns (see Appendix A).                              |

| Button | What it does                                                                                                                                                         |
|--------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Import | Upload a filled template (.xlsx, .xls or .csv). An <b>Import Tickets Summary</b> shows imported and failed rows; click <b>Download Error Report</b> for the reasons. |

**NOTE**

Imported tickets get the source "Excel Import". Import does not auto-assign an engineer and does not check for duplicate open tickets on the same serial number, so assign imported tickets from the ticket screen.

# 5 Raising a ticket

There are two ways to log a complaint. Use the **standard form** when the product was sold through ARCRM and its serial number, customer and invoice are on record. Use **Manual Register** for anything else, for example a customer or product not yet in the system.

## Standard ticket (Raise Support Ticket)

Click **New Ticket** on the Tickets Register.

Figure 8. Raise Support Ticket form.

- 1 **Product Serial No.:** type or scan the serial number, then press Enter or click the search icon. ARCRM fills in the customer, product, invoice, pincode, primary contact and MGR4 category, and shows an **Asset**

**Information Lookup** card with warranty and AMC status, sale and installation dates, last service date and the count of open and closed tickets.

- 2 Check or complete **Customer**, **Link Product** and **Link Invoice**. Once a customer is chosen, the product list is limited to products they own; tick **Show All Products** to see everything.
- 3 Enter the 6-digit **Pincode** of the service location. This decides which engineer is assigned automatically.
- 4 Choose the **Contact Person Name** from the customer's contacts, or use **+ Quick Add** to add a new contact (name, designation, mobile, email, optional primary flag). Phone is filled from the contact.
- 5 Optionally pick a **Problem** from the Problem List; it also fills an empty Subject.
- 6 Choose the **Priority**. A strip shows the SLA it applies, for example "First Response: 4 hrs | Resolution: 24 hrs".
- 7 Enter the **Subject** and **Description / Notes**, and attach up to three photos: product, serial / issue, and invoice.
- 8 Click **Raise Ticket**. A confirmation appears and the ticket number (format **CSM-YYYY-NNNN**) is created.

| Mandatory field                                      | Rule                             |
|------------------------------------------------------|----------------------------------|
| Customer, Product, Contact Person, Subject, Priority | Must be filled.                  |
| Pincode                                              | Exactly 6 digits.                |
| Contact phone / mobile                               | Must be a valid 10-digit number. |

### What ARCRM does automatically

- **Engineer assignment by pincode:** an active engineer whose direct pincodes include the ticket pincode is assigned; otherwise the engineer of the territory containing that pincode. If one is found the ticket starts as **Assigned**, otherwise **Open**.
- **SLA due times** are set from the priority's response and resolution hours.
- **Priority suggestions:** subjects with words such as "not working", "down", "crashed", "broken" or "failure" raise the priority to High or Critical. A product with no active warranty or AMC defaults to Medium.

#### IMPORTANT

A new ticket is refused if:

- the same serial number already has a ticket that is not Closed or Cancelled ("An active ticket ... already exists"), or
- the serial number is recorded as in stock rather than sold. Tickets can only be raised for sold products.

### Manual ticket registration

On the Raise Support Ticket screen, click **Manual Register**. Switch back at any time with **Standard Register**.

Find enquiries, quotes, customers, submodules...

**Figure 9.** Manual Ticket Registration form.

- **Customer Name** (required): select an existing customer, or click **+ Enter Manually** to type a new name. A new customer is created on save.
- **Product Name**: select a product or enter one manually. **Invoice No** and **Invoice Date** can be typed in.
- **Pincode** and **Subject** are required. Priority defaults to Medium.
- Manual tickets are marked *Manual* in the register, with category "Repair" and type "Service".

## 6 Working on a ticket

Open a ticket with **Details** in the register. The ticket page brings together the case details, entitlement, actions, assignment, the timeline, field visits and customer feedback.

The screenshot shows the ARCRM Ticket Details page for ticket CSM-2026-0017. The page is divided into two main sections: a left sidebar with case information and actions, and a right main area with a timeline and tabs for Communication & Timeline, Field Visits, and Feedback Survey.

**Left Sidebar:**

- Ticket Details:** CSM-2026-0017
- WATER LEAKAGE**
- CUSTOMER:** 7878785856, Suryalax Private Limited
- CONTACT:** priya, **PHONE:** 1245785471, **PINCODE:** 411068
- PRIORITY:** Medium, **CATEGORY:**
- INVOICE NO:** INV-2024-126, **PRODUCT SR. NO:** SN12222
- PRODUCT LINKED:** water purifier with RO + UV 12
- DESCRIPTION:** No description provided
- ENTITLEMENTS CHECK:** No active Warranty or AMC contract, BILLING COVERAGE: PAID
- ACTIONS & ESCALATION:** UPDATE STATUS (Open), CLOSE TICKET, ESCALATE TICKET
- GPS & LOCATION:** No GPS location recorded for this ticket yet, Optional address / location notes..., CAPTURE GPS LOCATION
- ASSIGN CASE:** SERVICE TEAM (Unassigned), ASSIGN ENGINEERS (0 SELECTED), PIN: 411068, No eligible engineers for PIN 411068, No engineers assigned for pincode 411068, UPDATE ASSIGNEES, REASSIGN TICKET

**Right Main Area:**

- Communication & Timeline:** AUDIT ACTIVITY LOG, Created: Ticket created via Web Portal, 9/7/2026, 12:38:57 AM
- Field Visits:**
- Feedback Survey:**

**Footer:** © 2026 ARCRM. ALWAYS READY CRM. PRIVACY POLICY TERMS OF SERVICE HELP CENTER

**Figure 10.** Ticket details: case information and actions on the left, timeline and tabs on the right.

### Case information and entitlement

The information card shows the subject, customer, contact, phone, pincode, priority, category, invoice, serial number, linked product and description, plus the assigned sales representative and service engineers (the first engineer is the **Lead**).

The **Entitlements Check** tells you whether the work is chargeable:

- **Warranty Valid** (with the expiry date), or
- **AMC Active** (with the number of visits left), or
- **No active Warranty or AMC contract.**

The matching **Billing Coverage** is shown: Under Warranty, Under AMC or Paid.

## Updating status and escalating

- 1 In **Actions & Escalation**, choose a new value in **Update Status**: Open, Assigned, In Progress, Pending Customer, Resolved, Closed or Cancelled.
- 2 When you choose **Resolved**, tick **First Call Resolved (FCR)** if the issue was fixed on the first contact.
- 3 Click **Save Status**. The button appears only after you change the value.

**Escalate Ticket** raises the escalation level by one and sets the status to **Escalated**. Escalation is always manual.

### NOTE

Only administrators, managers and the ticket's primary (lead) engineer can change status, add comments or escalate. Other engineers can only open tickets assigned to them.

## Assigning and reassigning engineers

In **Assign case**:

- Pick a **Service Team** if you use teams.
- Tick one or more engineers under **Assign Engineers**. Only engineers who cover the ticket's pincode (directly or through their territory) are listed.
- Click **Update Assignees**. The first engineer ticked becomes the lead, and an Open ticket moves to Assigned.

To hand the ticket to someone else, click **Reassign Ticket**. Choose the new engineer, give a **Reassignment Reason** (Leave, Sick, Emergency, Workload or Other), add notes if needed, and confirm. The new engineer is notified and the change is kept in the reassignment history.

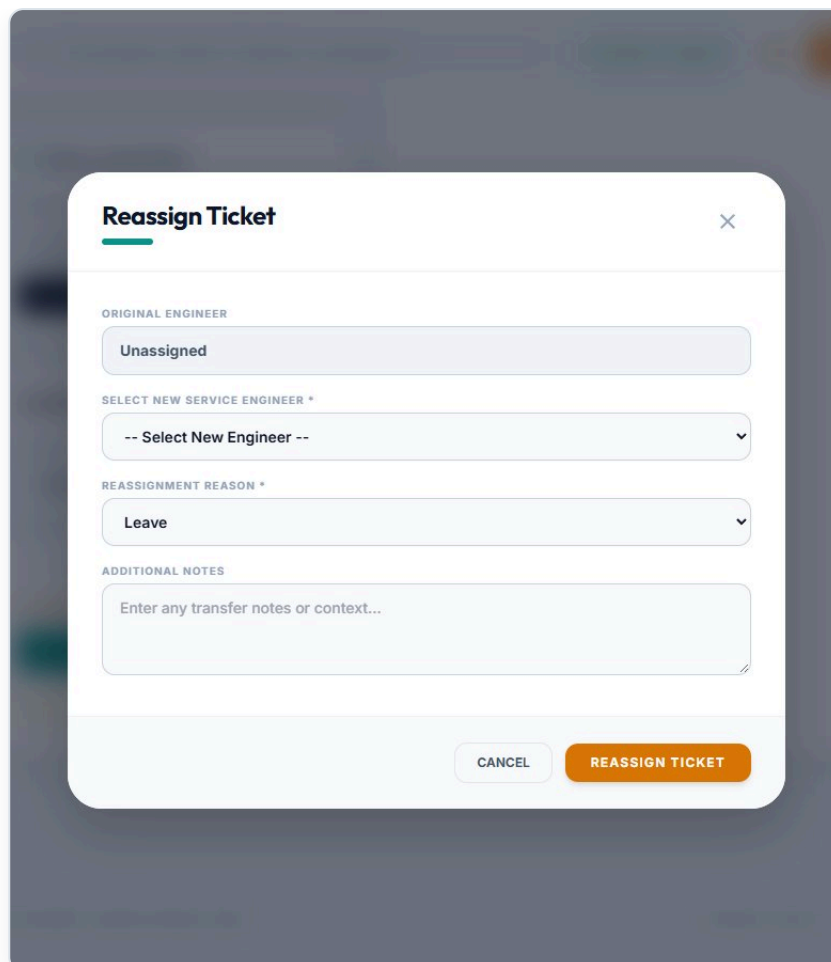

A screenshot of the 'Reassign Ticket' window. The window has a title bar with 'Reassign Ticket' and a close button. It contains four sections: 'ORIGINAL ENGINEER' with a dropdown showing 'Unassigned'; 'SELECT NEW SERVICE ENGINEER \*' with a dropdown showing '-- Select New Engineer --'; 'REASSIGNMENT REASON \*' with a dropdown showing 'Leave'; and 'ADDITIONAL NOTES' with a text area containing the placeholder 'Enter any transfer notes or context...'. At the bottom right are two buttons: 'CANCEL' and 'REASSIGN TICKET'.

Figure 11. Reassign Ticket window.

## Timeline, comments and GPS location

- The **Communication & Timeline** tab lists all comments and an **Audit Activity Log** of every change. Type in the comment box and click **Post** to add a note or customer reply.
- **GPS & Location**: click **Capture GPS Location** to stamp the site location on the ticket, with an optional address note. **Open in Google Maps** then shows the point.

### NOTE

Your browser asks for permission to use your location. If you refuse, or the device cannot get a GPS fix, ARCRM warns you and records the check-in without coordinates. It never records a made-up location.

## Field visits from the ticket

The **Field Visits** tab shows the active visit and past visit records for this ticket. Use **+ Schedule Field Visit Now** to book a visit: choose the date and time and the engineer. Engineers covering the ticket's territory are listed first, marked "Territory Match". For an active visit you can **Stamp Check-In Location** or **Reschedule Visit**. Chapter 8 explains the full visit process.

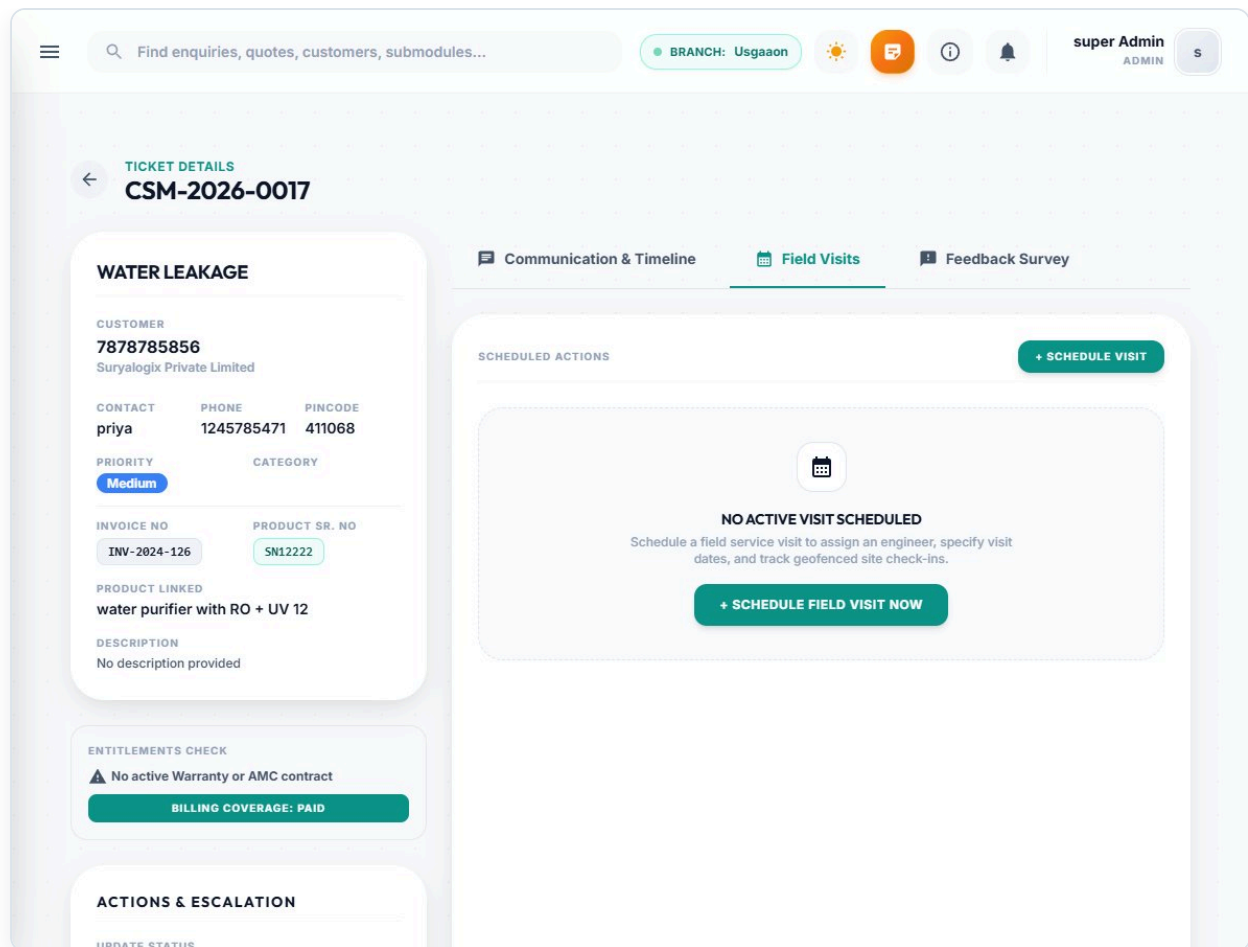

Figure 12. Field Visits tab on a ticket with no active visit.

## Customer feedback (CSAT)

On the **Feedback Survey** tab, select a 1 to 5 star rating, enter **Feedback Comments** (required) and click **Submit Review**. Once submitted, the tab shows "CSAT Feedback Logged". Ratings feed the CSAT figures on the dashboard and in reports.

The screenshot displays the 'TICKET DETAILS' page for ticket CSM-2026-0017. The page is divided into a left sidebar and a main content area. The sidebar contains a 'WATER LEAKAGE' section with customer details (7878785856, Suryalogix Private Limited), contact information (priya, 1245785471, 411068), priority (Medium), category, invoice number (INV-2024-126), product serial number (SN12222), product linked (water purifier with RO + UV 12), and description (No description provided). Below this is an 'ENTITLEMENTS CHECK' section showing a warning for no active warranty and a 'BILLING COVERAGE: PAID' status. At the bottom of the sidebar is an 'ACTIONS & ESCALATION' section with an 'UPDATE STATUS' button. The main content area has tabs for 'Communication & Timeline', 'Field Visits', and 'Feedback Survey'. The 'Feedback Survey' tab is active, showing a 'CUSTOMER SATISFACTION (CSAT) SURVEY' with a 5-star rating and a text box for feedback comments. A 'SUBMIT REVIEW' button is at the bottom of the survey form.

## Closing a ticket

Click **Close Ticket** in Actions & Escalation to open the closure form.

**Figure 14.** Close Ticket & Record Resolution.

- 1 Write the **Resolution Summary / Notes** (required).
- 2 If parts were used, record each one in the **Part Change & Expense Log**: select a spare (or choose *Custom Manual Entry*), set quantity and rate, and click **+ Add Item** . Tick **Replaced Spare Part** for part replacements.
- 3 Set **First Call Resolved (FCR)**, the **Customer Feedback Rating** (default 5 stars) and optional remarks.
- 4 Attach the **Product Image** (required): upload a photo or paste an image URL.
- 5 Optionally capture the **Customer Signature** on the pad and a **GPS** stamp.
- 6 Click **Confirm & Close Ticket** .

The resolution notes and parts list are saved with the ticket. Replaced parts are also written to the timeline as a "Part Change" entry. If the ticket is closed after its resolution due time, it is counted as an SLA breach.

## 7 Ticket lifecycle and SLA

### Ticket statuses

| Status           | Meaning                                            | Set automatically when...                                                              |
|------------------|----------------------------------------------------|----------------------------------------------------------------------------------------|
| Open             | Logged, not yet assigned or being worked.          | The ticket is created with no matching engineer; a visit is closed with "Close Visit". |
| Assigned         | An engineer owns the ticket.                       | An engineer is auto-matched, assigned or reassigned; a closed visit is re-opened.      |
| In Progress      | Work has started on site.                          | An engineer checks in to a visit.                                                      |
| Pending Customer | Waiting on the customer (access, approval, parts). | Set manually.                                                                          |
| Escalated        | Raised to a higher level.                          | <b>Escalate Ticket</b> is clicked.                                                     |
| Resolved         | Fixed, awaiting formal closure.                    | Set manually.                                                                          |
| Closed           | Complete.                                          | The ticket is closed from the ticket page or with "Close Ticket" on a visit.           |
| Cancelled        | Raised in error or withdrawn.                      | Set manually.                                                                          |

#### NOTE

Any status can be chosen from the Update Status list. For example, a Closed ticket can be reopened by setting it back to Open.

### SLA rules

- **Response due** = ticket created time + the priority's Response SLA hours.
- **Resolution due** = ticket created time + the priority's Resolution SLA hours.
- The response SLA is breached if the ticket first reaches In Progress, Pending Customer or Resolved after the response due time.
- The resolution SLA is breached if the ticket is resolved or closed after the resolution due time.
- A ticket is **Overdue** while it is unresolved and past its resolution due time.

Default priorities (created with **Seed Defaults** in CSM Config, and editable there):

| Priority | First response | Resolution |
|----------|----------------|------------|
| Critical | 1 hour         | 4 hours    |
| High     | 4 hours        | 24 hours   |
| Medium   | 8 hours        | 48 hours   |
| Low      | 24 hours       | 72 hours   |

## 8 Service visits

The Field Service Visits screen is the dispatch desk: it lists every visit, and it is where engineers check in on site, write the visit report and check out.

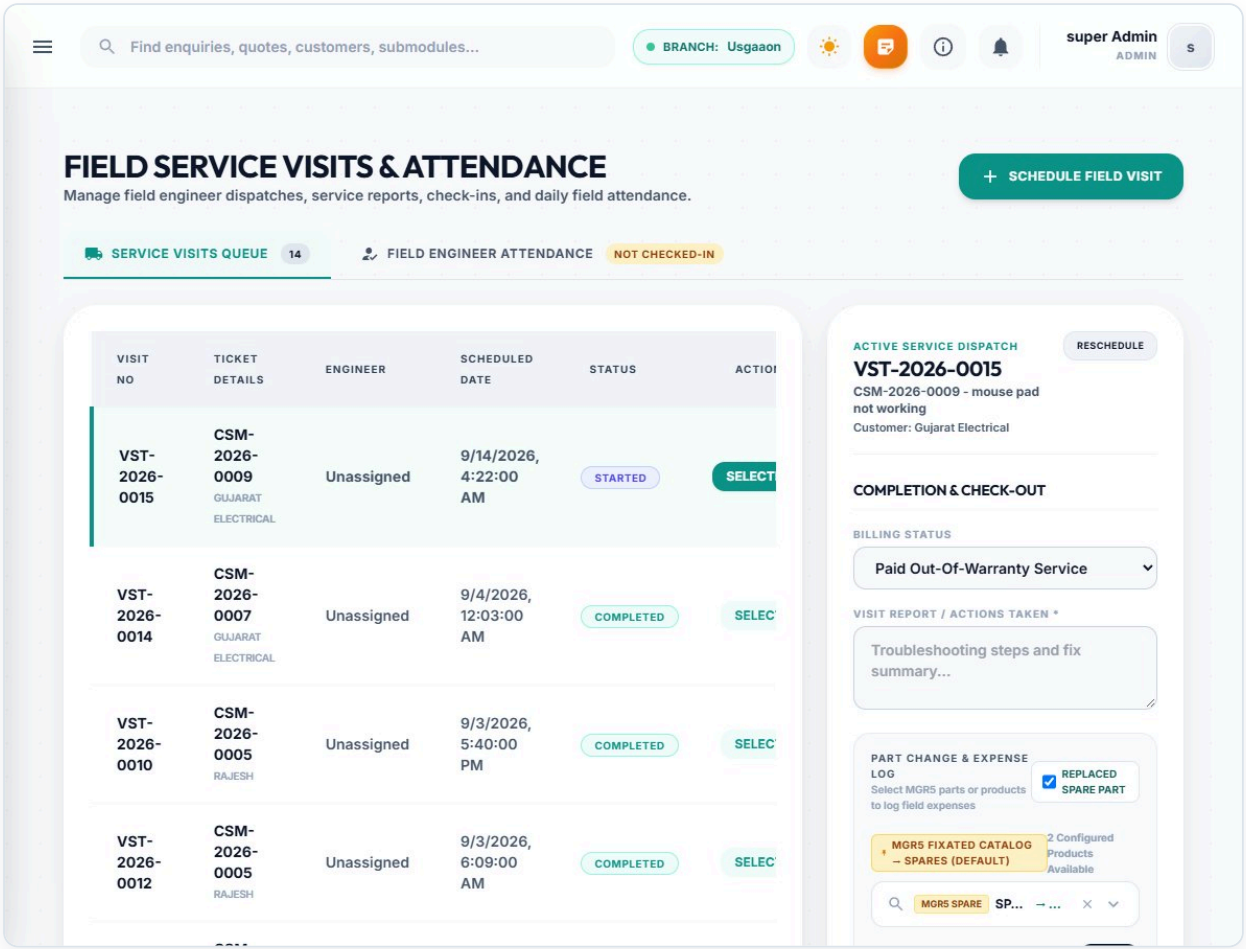

Figure 15. Service Visits Queue with the selected visit's dispatch panel.

Visit numbers use the format **VST-YYYY-NNNN**. Visit statuses are **Scheduled**, **In Transit**, **Started**, **Completed** and **Cancelled**.

## Scheduling a visit

- 1 Click **Schedule Field Visit**.
- 2 Select the **Ticket / Complaint**.
- 3 Set the **Appointment Date & Time**.
- 4 Choose the **Service Engineer**.
- 5 Set the **Billing Status**: Paid Out-Of-Warranty Service, Covered Under Warranty, Covered Under AMC Contract, or Complimentary Service.
- 6 Click **Schedule Visit**.

### IMPORTANT

Only one active visit (Scheduled, In Transit or Started) is allowed per customer. If one exists, reschedule it instead of creating another.

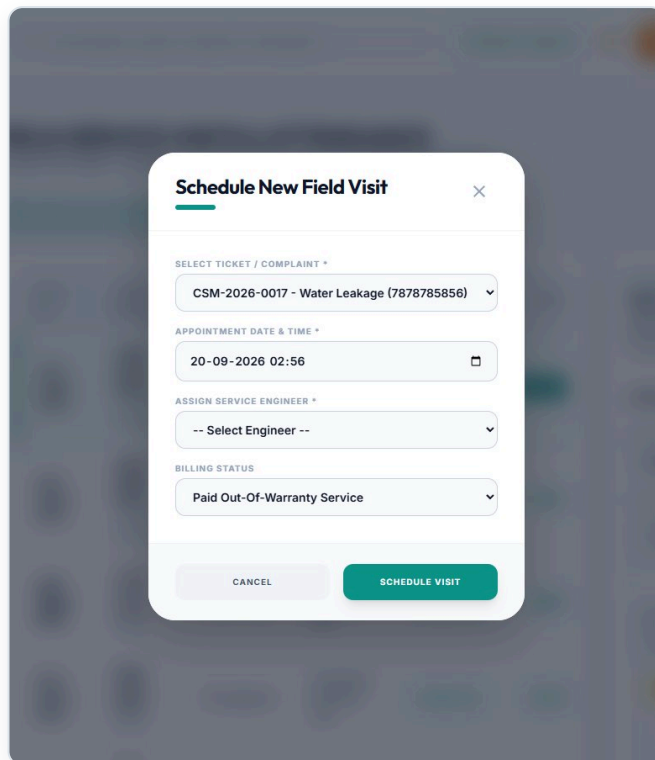

A screenshot of a mobile application interface showing a modal titled "Schedule New Field Visit". The modal contains four dropdown menus: "SELECT TICKET / COMPLAINT \*" with the selected value "CSM-2026-0017 - Water Leakage (7878785856)", "APPOINTMENT DATE & TIME \*" with the selected value "20-09-2026 02:56", "ASSIGN SERVICE ENGINEER \*" with the selected value "-- Select Engineer --", and "BILLING STATUS" with the selected value "Paid Out-Of-Warranty Service". At the bottom of the modal are two buttons: "CANCEL" and "SCHEDULE VISIT".

**Figure 17.** Active Service Dispatch panel for a started visit: Completion & Check-Out.

- 1 **Check in.** On arrival, click **Stamp Check-In Location**. Your GPS position and address are recorded, the visit becomes **Started** and the ticket becomes **In Progress**.
- 2 **Billing Status.** Confirm or correct it.
- 3 **Visit Report / Actions Taken** (required): describe the work done.
- 4 **Parts and expenses.** Add each spare part or charge with quantity and rate; the amount is calculated. Tick **Replaced Spare Part** for replacements.
- 5 **Product picture** (required): click **Upload Photo**.
- 6 **Customer signature:** ask the customer to sign on the pad.
- 7 **Finish** with one of the two buttons below. Your location is captured again as the check-out stamp.

| Button       | Result                                                                                                                                                                                                                                    |
|--------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Close Visit  | The visit is Completed but the ticket stays <b>Open</b> for follow-up. A <b>Next Action / Next Step</b> is required; use a preset (Need Painter, Need Material, Customer Not Available, Part Required, Follow-up Visit) or type your own. |
| Close Ticket | The visit is Completed and the ticket is <b>Closed</b> as resolved.                                                                                                                                                                       |

**NOTE**

When the billing status is **Under AMC**, finishing the visit uses one of the customer's AMC visits. The AMC expires automatically when no visits are left.

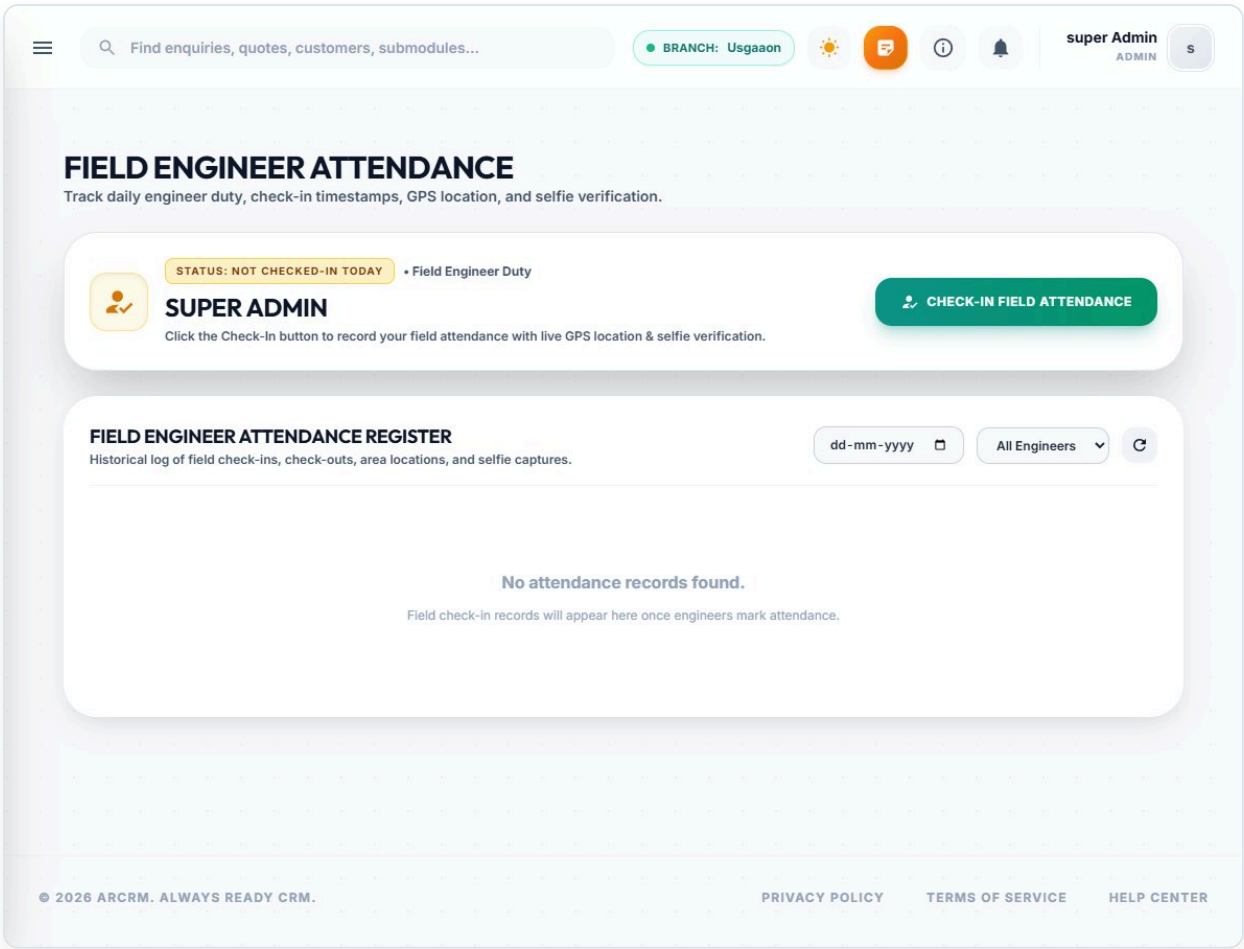

## Completed visits, rescheduling and re-opening

A completed visit shows its **Visit Report & Summary**: billing, check-in and check-out times, GPS stamp (with **Open Map** ), report, next action, parts with total amount, product picture and customer signature.

- **Reschedule** on an active visit changes the date, time or engineer and resets the visit to Scheduled.
- **Schedule New Visit for Ticket** books a separate follow-up visit.
- **Re-open / Reschedule Visit** puts a completed or cancelled visit back on the schedule. For a completed visit, the earlier report, photo, signature and parts are kept in the visit's history. If that visit had closed the ticket, the ticket is re-opened as **Assigned**.

## 9 Field attendance

Field engineers mark their working day with a GPS- and selfie-verified check-in and check-out.

**Figure 18.** Field Engineer Attendance: today's status and the attendance register.

The status card shows one of: **Not Checked-In Today**, **Currently Checked-In** or **Attendance Completed Today**. The button changes with the status.

## Checking in and out

- 1 Click **Check-In Field Attendance**.
- 2 Enter the **Area / Site Name**.
- 3 The **GPS Location** is detected. Use **Refresh High-Accuracy GPS** to retry, or **View Map Pin** to check it. If location is unavailable, type the street address.
- 4 Click **Take / Upload Selfie** (required).
- 5 Add optional remarks and click **Record Check-In**.

At the end of the day, click **Check-Out Now**, take a check-out selfie, and click **Record Check-Out**.

### NOTE

You can check in only once per day.

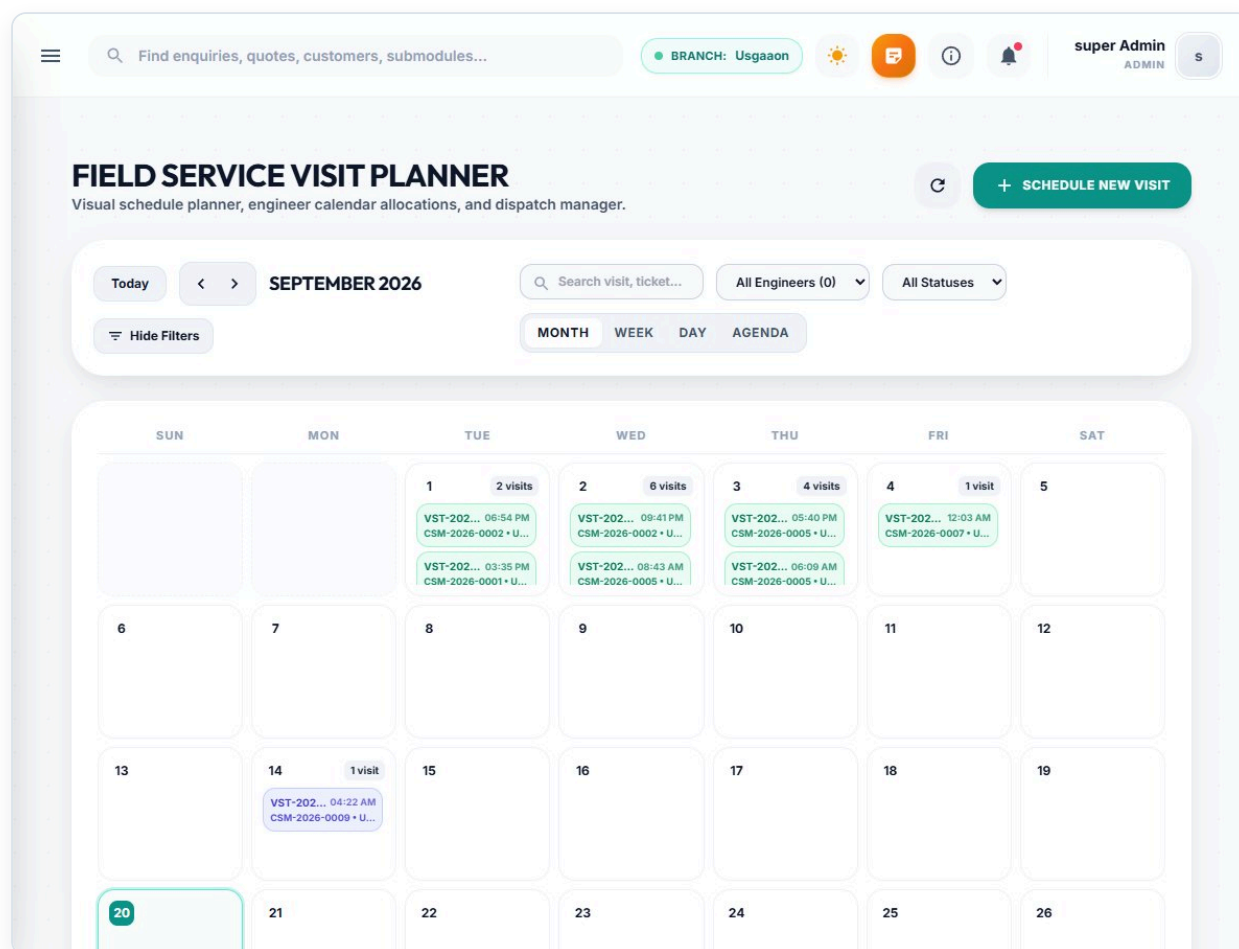

Figure 19. Attendance check-in form.

## Attendance register

The register lists Employee Name, Date, Check-In details (with a map link), Check-Out details ("Active Duty" until checked out), Selfie (click to enlarge) and Status. Filter it by date. Administrators can also filter by engineer; everyone else sees only their own records.

# 10 Visit planner

The Field Service Visit Planner shows every visit on a calendar, so you can balance engineer workload and spot gaps.

**Figure 20.** Visit Planner, month view.

- Move through dates with **Today** and the previous / next arrows.
- Switch between **Month**, **Week**, **Day** and **Agenda** views.
- Filter with the search box (visit or ticket number), the engineer list and the status list.
- Each day shows up to three visit chips, then "n more visits". Click a chip to open **Visit Dispatch Details**: status, ticket, engineer, date, reschedule history, check-in stamp and visit report. From there you can **Reschedule Visit**.
- **Schedule New Visit** books a visit: choose the support ticket, engineer, date and time, and billing status, then click **Confirm Schedule**.

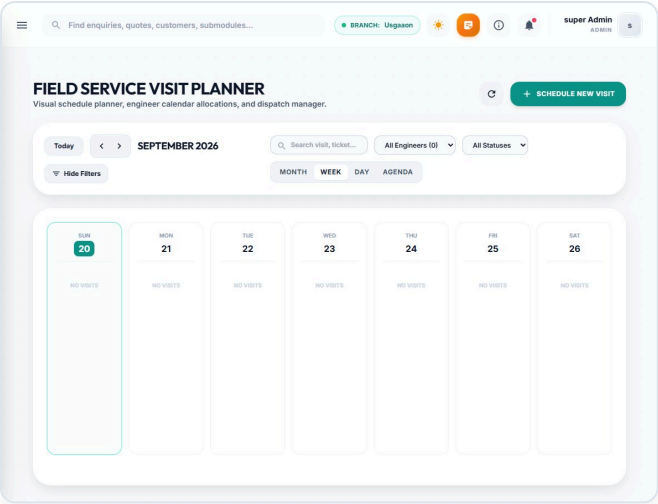

Figure 21. Week view.

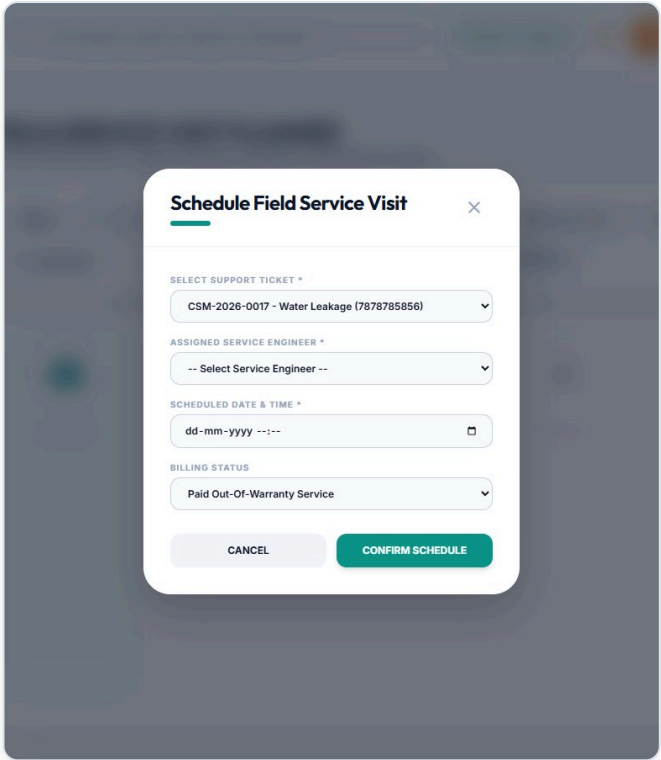

Figure 22. Schedule Field Service Visit from the planner.

# 11 Warranty and AMC

"Entitlements & Contracts" holds product warranties and Annual Maintenance Contracts (AMC), and tells you whether a service call is covered or chargeable.

The screenshot displays the 'ENTITLEMENTS & CONTRACTS' module interface. At the top, there is a search bar and a branch selector set to 'Usgaon'. The user is logged in as 'super Admin'. The main heading is 'ENTITLEMENTS & CONTRACTS' with a sub-description: 'Manage customer warranties, product serial numbers, and annual maintenance contracts.' Below this, there are buttons for '+ ADD WARRANTY', '+ ADD AMC', 'IMPORT WARRANTY', 'IMPORT AMC', 'WARRANTY TEMPLATE', and 'AMC TEMPLATE'. A 'VERIFY SERVICE ELIGIBILITY' section contains dropdowns for 'CUSTOMER', 'INVOICE', and 'PRODUCT', along with a 'CHECK COVERAGE' button. A message indicates 'No product warranties registered.' The footer shows '© 2026 ARCRM. ALWAYS READY CRM.' and links to 'PRIVACY POLICY', 'TERMS OF SERVICE', and 'HELP CENTER'.

**Figure 23.** Entitlements & Contracts with the coverage check and the Product Warranties register.

## Checking service eligibility

- 1 In **Verify Service Eligibility**, select the **Customer**, then the **Invoice**, then the **Product**.
- 2 Click **Check Coverage**.

ARCRM shows a **billing recommendation** with details of the invoice and product, warranty, AMC and scheduled maintenance. The rules are applied in this order:

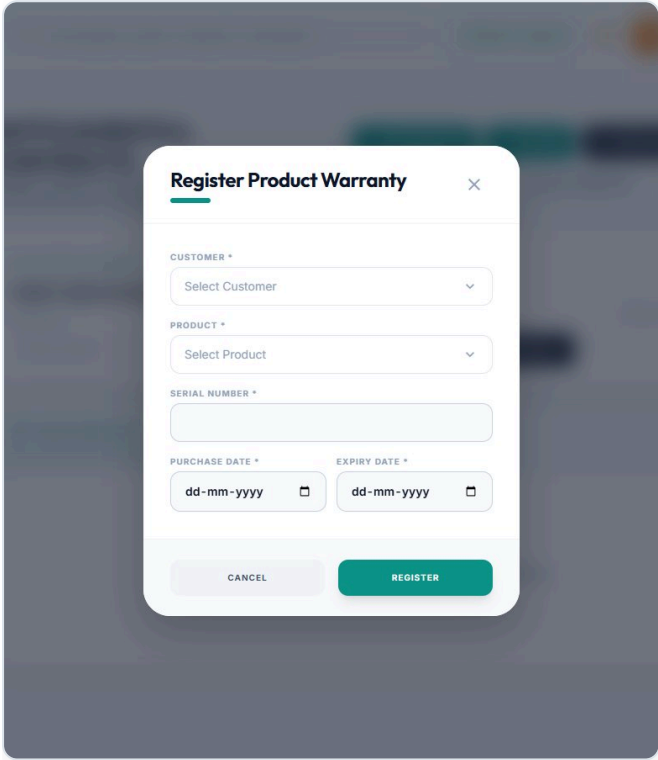

1. An active, unexpired warranty for that customer and product → **Under Warranty**.
2. Otherwise, an AMC that is in date and has visits left → **Under AMC**.
3. Otherwise → **Paid**.

**TIP**

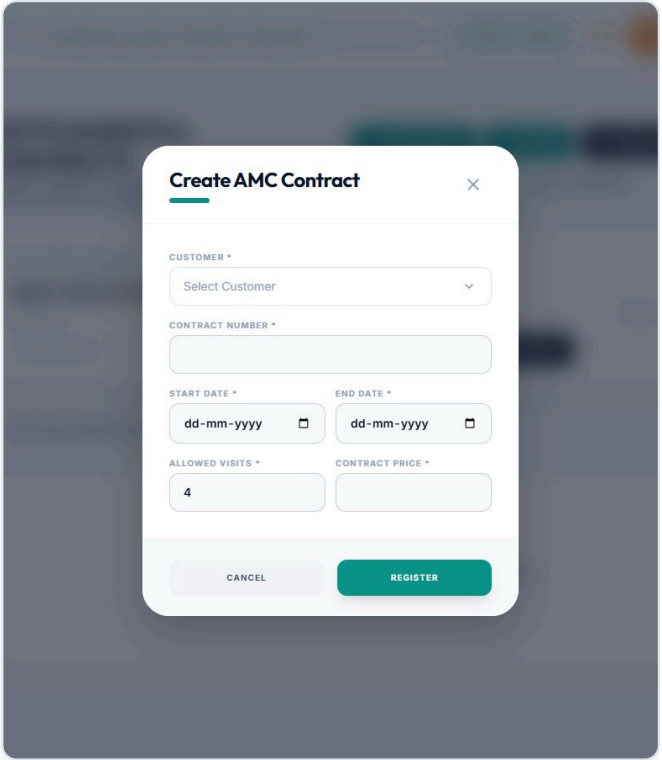

To check coverage by serial number, use the Product Serial No. lookup on the Raise Support Ticket form (Chapter 5).

**Warranty and AMC registers**

**Product Warranties** lists serial number, customer, product, purchase date, expiry date and status. **AMC Contracts** lists contract number, customer, duration, visits allowed and used, price and status. Records past their end date are marked Expired automatically.

**Figure 24.** Register Product Warranty: Customer, Product, Serial Number, Purchase and Expiry dates (all required).

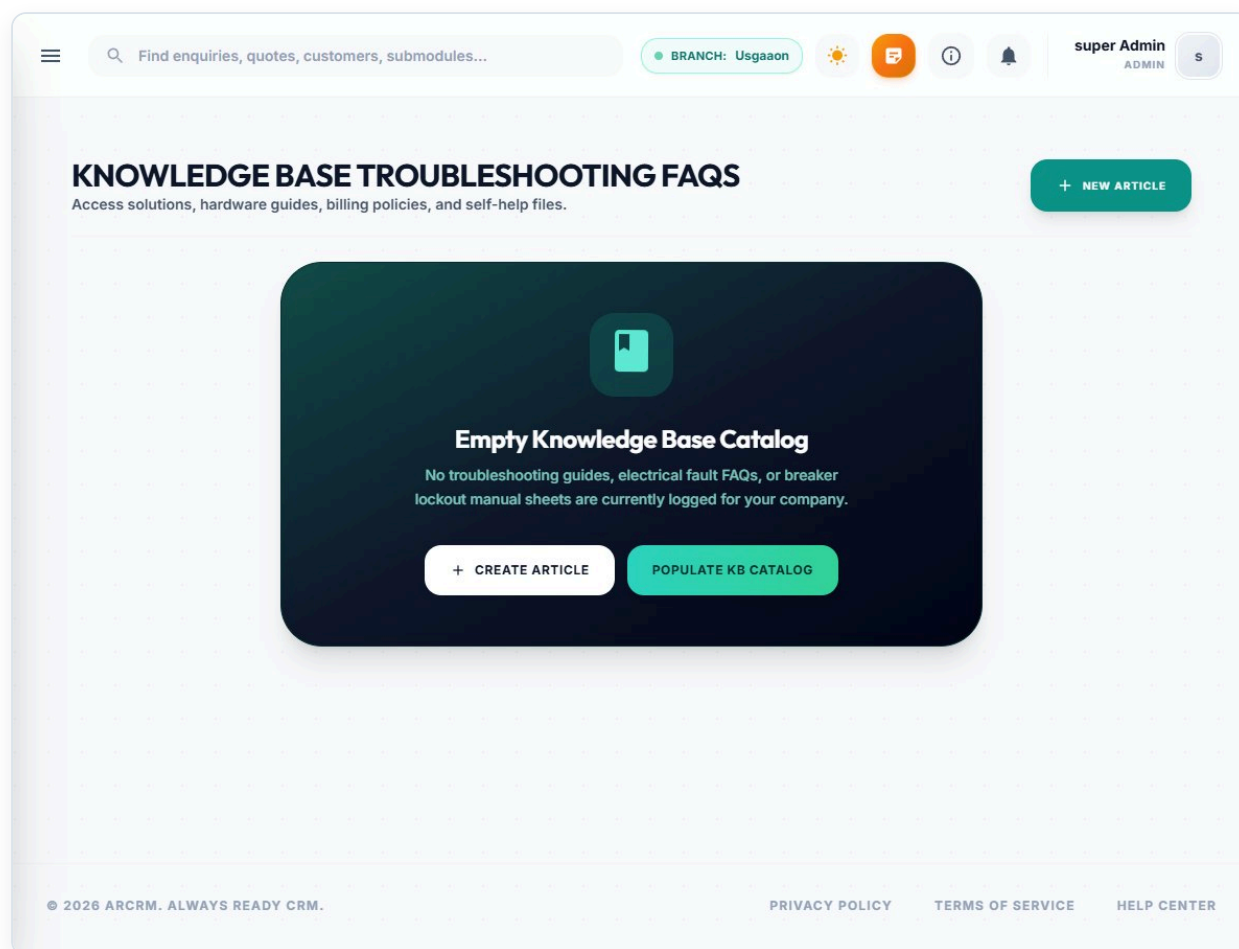

**Figure 25.** Create AMC Contract: Customer, Contract Number, Start and End dates, Allowed Visits (default 4), Contract Price.

Click **Add Warranty** or **Add AMC** , fill in the form and click **Register** . To load many records at once, download the **Warranty Template** or **AMC Template** , fill it in, and upload it with **Import Warranty** or **Import AMC** . An **Upload Summary** shows the Imported, Updated, Skipped and Failed counts, with an error report you can download. The columns are listed in Appendix A.

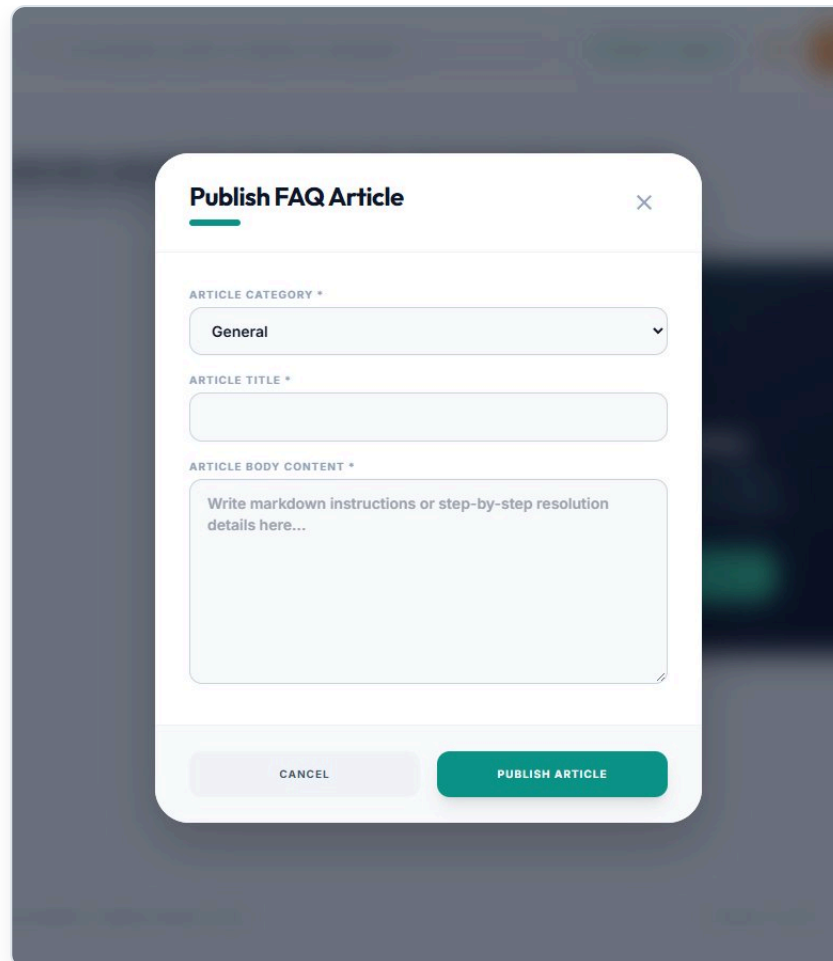

## 12 Knowledge base

The Knowledge Base holds troubleshooting guides and FAQs that the service team can search while handling a case.

**Figure 26.** Knowledge Base (shown here before any articles have been added).

- Search articles by keyword, or filter by category: General, Warranty Claims, Troubleshooting, Billing & Invoices, Device Reset.
- Click an article to read it. The reader shows the author, view count and article ID; each opening counts as a view.
- Administrators can click **New Article**, choose the **Article Category**, enter the **Title** and **Body Content**, and click **Publish Article**. They can also edit or delete articles with the icons on each one.
- An empty Knowledge Base offers **Create Article**, and **Populate KB Catalog** to load starter articles.

The image shows a modal dialog box titled "Publish FAQ Article" with a close button (X) in the top right corner. The dialog contains three main input sections: "ARTICLE CATEGORY \*" with a dropdown menu currently showing "General"; "ARTICLE TITLE \*" with a single-line text input field; and "ARTICLE BODY CONTENT \*" with a multi-line text area. The text area contains the placeholder text "Write markdown instructions or step-by-step resolution details here...". At the bottom of the dialog, there are two buttons: a light gray "CANCEL" button and a teal "PUBLISH ARTICLE" button.

## 13 CSM configuration

CSM Master Configurations holds the lists and rules the rest of the module uses. Set it up before going live.

**Figure 28.** CSM Master Configurations, Categories tab.

### Master lists

| Tab            | Purpose                                                       | Defaults from Seed Defaults                                                                 |
|----------------|---------------------------------------------------------------|---------------------------------------------------------------------------------------------|
| Categories     | Classify tickets for reporting.                               | Complaint, Service Request, Product Issue, Billing Query, Technical Support, Warranty Claim |
| Ticket Types   | How the case arrived or was handled.                          | Inbound Call, Email, WhatsApp, Customer Portal, Field Service                               |
| Priorities     | Urgency, with response and resolution SLA hours and a colour. | Low, Medium, High, Critical                                                                 |
| Ticket Sources | Channel of the complaint.                                     | Web Portal, Email, WhatsApp, Mobile App, Phone Call, Sales Team, Service Engineer           |
| Designations   | Customer contact designations.                                | —                                                                                           |

| Tab                     | Purpose                                     | Defaults from Seed Defaults  |
|-------------------------|---------------------------------------------|------------------------------|
| Service Teams           | Groups of engineers.                        | General Support Team         |
| Engineers (wrench icon) | Service engineers and the areas they cover. | Created from Employee Master |

Click **Seed Defaults** to create the standard values. To add a value, open the tab, click **Add New**, fill in **Name** and **Description** (plus Response SLA, Resolution SLA and Color Tag for priorities), and click **Save**. Use the pencil and bin icons to edit or delete.

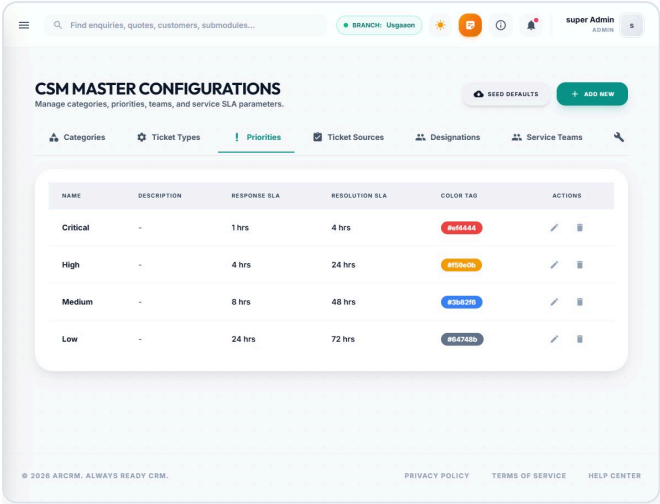

Figure 29. Priorities with their SLA hours.

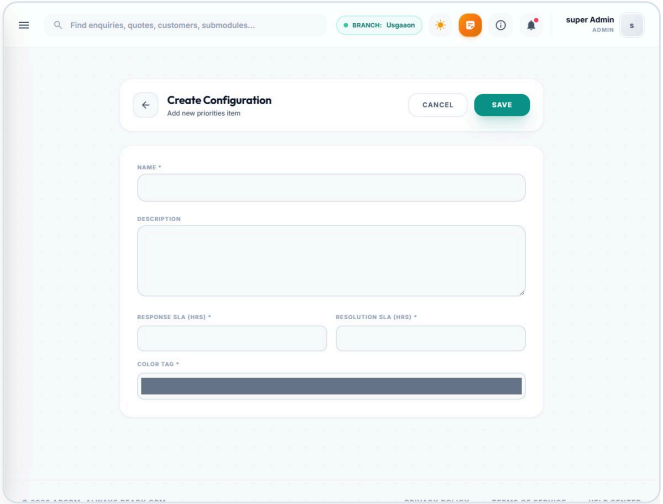

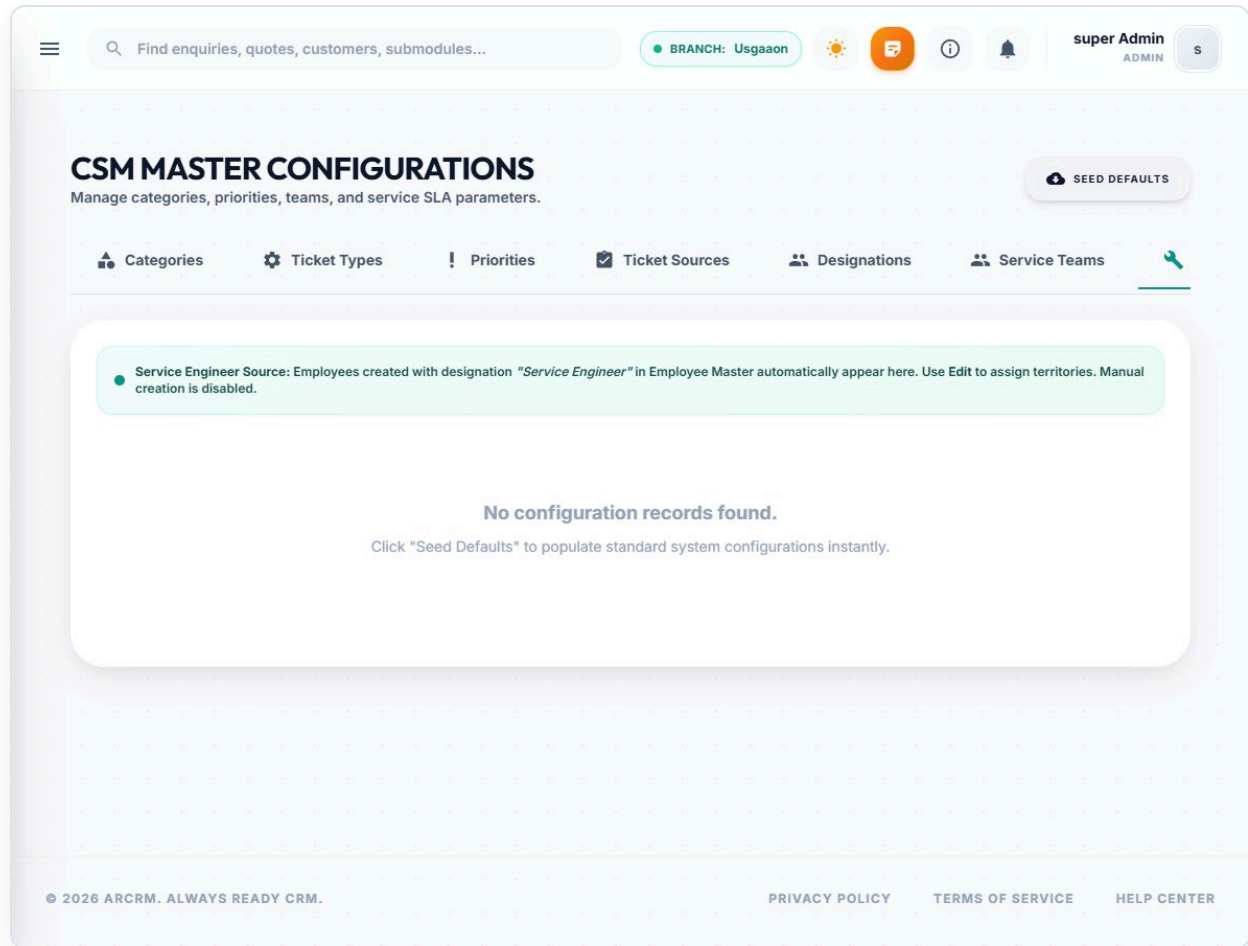

Figure 30. Create Configuration form for a priority.

## Engineers and territories

Service engineers are not created here. Every employee in Employee Master with the designation "**Service Engineer**" appears automatically. Click **Edit** on an engineer to:

- **Assign Territory**: all pincodes in the territory are covered automatically;
- add **Additional Direct Pincodes** (6-digit, comma-separated);
- set the **Status** to Active or Inactive.

**Figure 31.** Engineers Master. It is empty until employees with the designation "Service Engineer" exist.

#### IMPORTANT

Automatic ticket assignment depends entirely on these pincodes and territories. If no engineer covers a ticket's pincode, the ticket stays **Unassigned** and must be assigned by hand. The Engineers list can take 15 seconds or more to load.

# 14 Service reports

The Service Reports Portal analyses ticket volumes, SLA, resolution time, first-call resolution, engineer productivity and customer satisfaction.

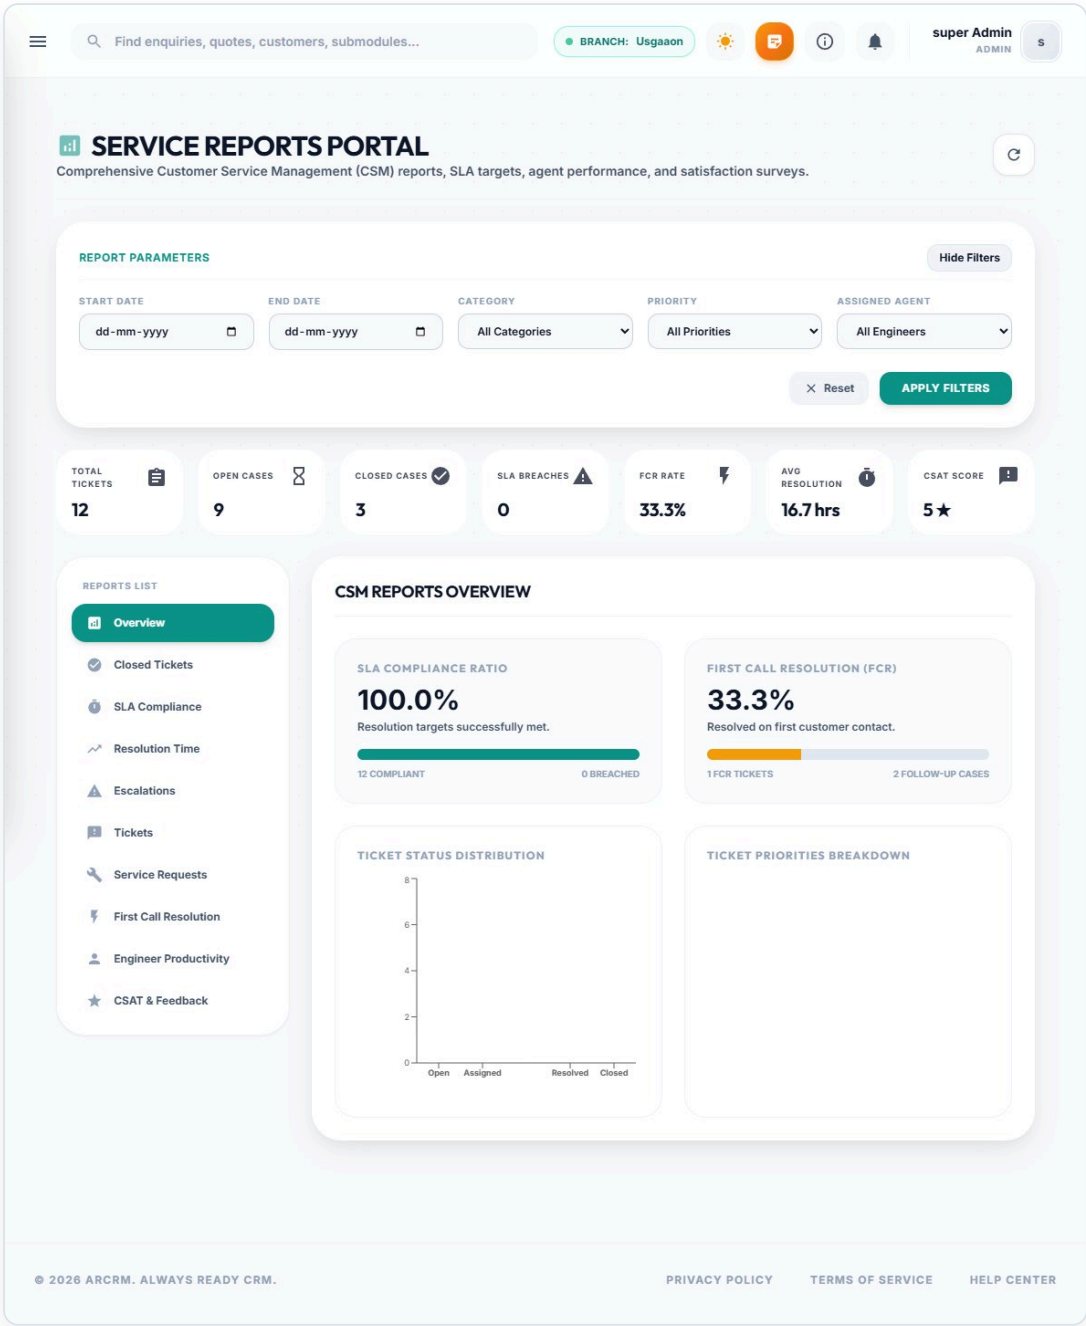

Figure 32. Service Reports Portal: parameters, KPI cards and the Overview report.

## Report parameters and KPIs

Set **Start Date**, **End Date**, **Category**, **Priority** and **Assigned Agent**, then click **Apply Filters** ( **Reset** clears them). The KPI cards show Total Tickets, Open Cases, Closed Cases, SLA Breaches, FCR Rate, Average Resolution time and CSAT score.

## Available reports

| Report                | Shows                                                                                                    | CSV export |
|-----------------------|----------------------------------------------------------------------------------------------------------|------------|
| Overview              | SLA compliance and FCR summary.                                                                          | —          |
| Closed Tickets        | All tickets closed in the period.                                                                        | Yes        |
| SLA Compliance        | Met vs breached, by priority and category.                                                               | —          |
| Resolution Time       | Time taken to resolve.                                                                                   | —          |
| Escalations           | Escalated tickets.                                                                                       | Yes        |
| Tickets               | Tickets whose category or type contains "complaint".                                                     | Yes        |
| Service Requests      | Service request tickets.                                                                                 | —          |
| First Call Resolution | Tickets resolved on first contact.                                                                       | —          |
| Engineer Productivity | Per engineer: assigned cases, cases resolved, active pending, average CSAT rating and efficiency rating. | Yes        |
| CSAT & Feedback       | Customer ratings and comments.                                                                           | Yes        |

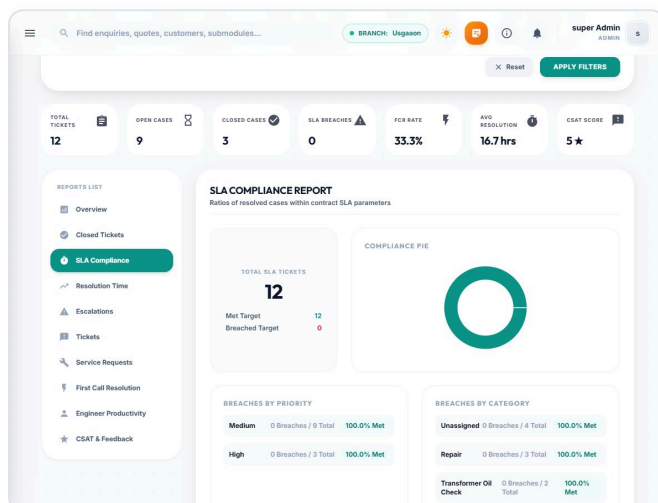

Figure 33. SLA Compliance report.

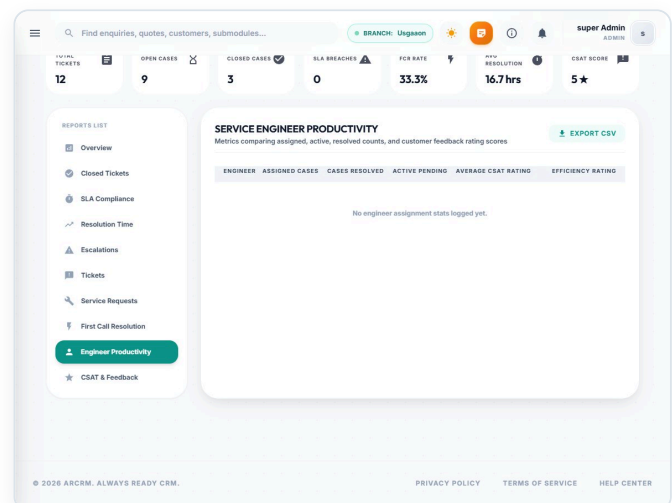

Figure 34. Service Engineer Productivity report.

# 15 Root cause analysis (RCA)

For recurring or serious problems, record a structured Root Cause Analysis with the 5-Why method, a root cause category and corrective and preventive actions (CAPA).

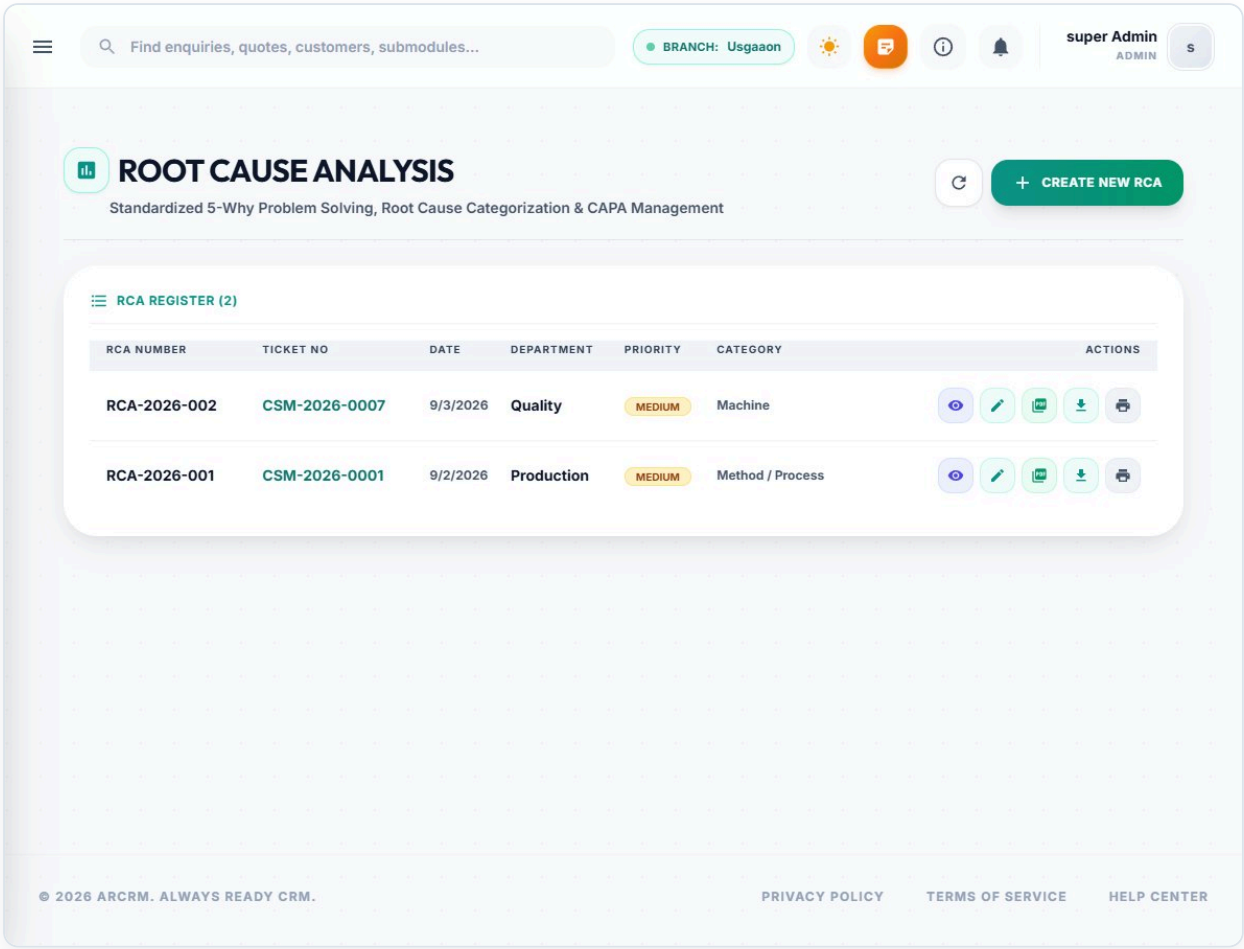

Figure 35. RCA Register.

The register lists RCA Number, Ticket No, Date, Department, Priority and Category. The row icons let you view the RCA document, edit it, download it as PDF or Excel, and print it.

## Creating an RCA

Click **Create New RCA** , complete the Quality Standard RCA Sheet section by section, then click **Save RCA** . The RCA is linked to a ticket by its ticket number. Creating an RCA is a separate step and is not part of closing a ticket.

| Section                       | Fields                                                                                                                                                     |
|-------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1. Incident Details           | RCA Number (automatic, RCA-YYYY-NNN), Ticket No. (select, or enter manually), Date, Department, Priority (High / Medium / Low), Problem Statement, Impact. |
| 2. 5-Why Analysis             | Why 1 to Why 5, each answering the previous one.                                                                                                           |
| 3. Root Cause Category        | Man / People, Machine, Method / Process, Material, Measurement, Environment or System / IT, plus the Root Cause statement.                                 |
| 4. CAPA                       | One or more actions ( <b>Add Action</b> ), each with Responsible Person, Target Date and Status (Open, In Progress, Completed).                            |
| 5. Effectiveness Verification | Verification Date, Effectiveness (Effective, Partially Effective, Not Effective) and remarks.                                                              |

## 16 Access and permissions

Administrators grant access to each Customer Service screen in the authorization settings. Each screen has its own permission:

| Permission                | Screens                                                       |
|---------------------------|---------------------------------------------------------------|
| CSM Dashboard             | CSM Dashboard                                                 |
| Tickets Register          | Tickets Register, My Tickets, My Team Tickets, ticket details |
| Service Visits            | Service Visits, Visit Planner                                 |
| Field Engineer Attendance | Field Attendance                                              |
| Warranty & AMC            | Warranty & AMC                                                |
| Knowledge Base            | Knowledge Base (reading; publishing is for administrators)    |
| CSM Config                | CSM Config and Engineers Master                               |
| Service Reports           | Service Reports                                               |
| RCA Report                | RCA Report                                                    |

Default access by role: **Admin** and **Manager** get every Customer Service screen. **Sales** and **Employee** users get Tickets Register, Field Attendance and Knowledge Base.

### NOTE

Users who had CSM Dashboard access before the RCA Report permission was introduced keep access to the RCA Report until an administrator changes it.

## A Appendix: import templates

### Ticket import

| Column                  | Notes                                                              |
|-------------------------|--------------------------------------------------------------------|
| Ticket No               | Optional; must be unique. Left blank, a number is generated.       |
| Customer Code           | Required. Customer code or name.                                   |
| Contact Phone *         | Required. Exactly 10 digits.                                       |
| Alternate Mobile Number | Optional.                                                          |
| Product Code            | Must exist in Products, otherwise the row fails.                   |
| Product Serial No.      | Created automatically if new, as long as a product is given.       |
| Issue Title             | Required. Becomes the ticket subject.                              |
| Description             | Optional.                                                          |
| Priority                | Name of a priority. Unknown names are created with 4 h / 24 h SLA. |
| Status                  | One of the ticket statuses (Chapter 7).                            |
| Issue Date              | Date the complaint was received (YYYY-MM-DD).                      |

### Warranty and AMC import

| Template        | Columns                                                                              |
|-----------------|--------------------------------------------------------------------------------------|
| <b>Warranty</b> | Customer Code, Product Code, Serial Number, Purchase Date, Expiry Date, Status       |
| <b>AMC</b>      | Customer Code, Contract Number, Start Date, End Date, Allowed Visits, Amount, Status |

## B Appendix: troubleshooting

| Problem                                                                | What to do                                                                                                                      |
|------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------|
| <b>A Customer Service menu item is missing</b>                         | You don't have that permission. Ask your administrator (Chapter 16).                                                            |
| <b>"An active ticket ... already exists for Product Serial No."</b>    | That product already has an open ticket. Open and update the existing ticket instead of raising a new one.                      |
| <b>"Complaints or tickets can only be generated for SOLD products"</b> | The serial number is recorded as in stock. Check the serial number, or use Manual Register.                                     |
| <b>New tickets are always "Unassigned"</b>                             | No active engineer covers the pincode. In CSM Config → Engineers, assign territories or direct pincodes (Chapter 13).           |
| <b>An engineer can't be selected in Assign Engineers</b>               | Only engineers covering the ticket's pincode are listed. Add the pincode to the engineer, or correct the ticket's pincode.      |
| <b>"A service visit is already scheduled for this customer"</b>        | The customer has an active visit. Reschedule that visit instead.                                                                |
| <b>Check-in saved "GPS location unavailable"</b>                       | Allow location access for ARCRM in your browser or phone settings and turn on device location, then capture the location again. |
| <b>"Users are allowed to check in only once per day"</b>               | You have already checked in today. Use Check-Out Now at the end of the day.                                                     |
| <b>Can't close the ticket or visit</b>                                 | The resolution notes / visit report and the product photo are required. For Close Visit, a Next Action is also required.        |
| <b>The Export file has more tickets than the screen</b>                | Export only follows the search box, status and priority filters, not the tab, customer, branch or ticket type.                  |
| <b>A ticket is missing from the Schedule Visit list</b>                | The list shows the 20 most recent tickets. Schedule the visit from the ticket's Field Visits tab instead.                       |
