4. LOGIN AND HOME DASHBOARD

Start work and check the day at a glance

Section: Introduction & CRM
DocRef: UM-4

WHAT THIS SCREEN IS FOR

Use the login page to enter the system. After login, the dashboard gives a quick view of important work such as enquiries, quotations, sales, planning, service, or payroll depending on your access.

HOW TO USE IT

Enter your email and password. Open Dashboard from the left menu. Use the cards, charts, and lists to see what needs attention today.

GOOD WORKING HABIT

If a menu is missing, your role may not have access. Do not share your password. Log out when using a shared computer.

EXPECTED RESULT

You should know what work is pending and which module to open next.

DAILY MASTER DATA CHECK

01
Search existing record

02
Enter clean details

03
Save and reuse

Correct name

Contact details

Owner/status

Master

>

Transaction

>

Report

QUICK EXPLANATION

Good master data makes quotations, invoices, reports, and service records easier to use.

BEFORE SAVING

Check the important fields for Login and Home Dashboard: name, date, customer or employee, amount, status, owner, and any notes or attachments. A quick check prevents rework later.

DAILY HABIT

Keep statuses updated, add clear notes, and avoid duplicate records. If you are not sure which screen to use, check the menu name and ask your manager before changing old data.

AFTER SAVING

Open the list page or dashboard again and confirm the record appears correctly. If reports do not update immediately, refresh the page and check that filters are set correctly.

5. USER ROLES AND ACCESS

Understand why some screens are hidden

WHAT THIS SCREEN IS FOR

The system shows screens based on your role. Admin users manage setup and permissions. Managers review team work. Sales, service, and payroll users work on their assigned records.

HOW TO USE IT

Ask the admin to assign the correct role. Open only the modules needed for your job. If access is blocked, request permission instead of using another user account.

GOOD WORKING HABIT

Access control protects company data. Managers should review access when a person changes department or role.

EXPECTED RESULT

Each user sees the correct menus and can work without changing data outside their responsibility.

Report

QUICK EXPLANATION

Good master data makes quotations, invoices, reports, and service records easier to use.

BEFORE SAVING

Check the important fields for User Roles and Access: name, date, customer or employee, amount, status, owner, and any notes or attachments. A quick check prevents rework later.

DAILY HABIT

Keep statuses updated, add clear notes, and avoid duplicate records. If you are not sure which screen to use, check the menu name and ask your manager before changing old data.

AFTER SAVING

Open the list page or dashboard again and confirm the record appears correctly. If reports do not update immediately, refresh the page and check that filters are set correctly.

6. BASIC NAVIGATION

Move around the system confidently

WHAT THIS SCREEN IS FOR

Most screens follow the same pattern: search or filter records, open a record, add or edit details, save, and return to the list.

HOW TO USE IT

Use the left menu to open a module. Use Search, Filter, New, Edit, View, Save, Delete, Import, or Export where available. Check toast messages at the top right after saving.

GOOD WORKING HABIT

Use filters before assuming a record is missing. Read required field marks before saving. Keep notes short but clear.

EXPECTED RESULT

You can find records faster and avoid creating duplicate entries.

DAILY MASTER DATA CHECK

01

Master

><div>Transaction</div>><div>Report</div>

QUICK EXPLANATION

Good master data makes quotations, invoices, reports, and service records easier to use.

BEFORE SAVING

Check the important fields for Basic Navigation: name, date, customer or employee, amount, status, owner, and any notes or attachments. A quick check prevents rework later.

DAILY HABIT

Keep statuses updated, add clear notes, and avoid duplicate records. If you are not sure which screen to use, check the menu name and ask your manager before changing old data.

AFTER SAVING

Open the list page or dashboard again and confirm the record appears correctly. If reports do not update immediately, refresh the page and check that filters are set correctly.

7. CUSTOMERS

Maintain customer master records

WHAT THIS SCREEN IS FOR

The Customers screen stores company names, contact details, GST or tax details, address, sales owner, and other customer information used in enquiries, quotations, planning, and service.

HOW TO USE IT

Open Master > Customers. Click New or Edit. Fill the customer name, address, contact details, and owner. Save and check the customer appears in the list.

GOOD WORKING HABIT

Search before adding a customer. Keep spelling consistent. Update old contact details before creating a quotation.

EXPECTED RESULT

Sales and service teams can select the correct customer everywhere in the system.

QUICK EXPLANATION

Good master data makes quotations, invoices, reports, and service records easier to use.

BEFORE SAVING

Check the important fields for Customers: name, date, customer or employee, amount, status, owner, and any notes or attachments. A quick check prevents rework later.

DAILY HABIT

Keep statuses updated, add clear notes, and avoid duplicate records. If you are not sure which screen to use, check the menu name and ask your manager before changing old data.

AFTER SAVING

Open the list page or dashboard again and confirm the record appears correctly. If reports do not update immediately, refresh the page and check that filters are set correctly.

WHAT THIS SCREEN IS FOR

The Vendors screen stores supplier information used for products, purchase work, GRN, and internal reference.

HOW TO USE IT

Open Master > Vendors. Add vendor name, address, phone, email, and other details. Save changes and review the vendor list.

GOOD WORKING HABIT

Keep vendor names unique. Update inactive vendors instead of deleting if old records still refer to them.

EXPECTED RESULT

Purchase and product teams can select vendors correctly during daily work.

Check the important fields for Vendors: name, date, customer or employee, amount, status, owner, and any notes or attachments. A quick check prevents rework later.

DAILY HABIT

Keep statuses updated, add clear notes, and avoid duplicate records. If you are not sure which screen to use, check the menu name and ask your manager before changing old data.

AFTER SAVING

Open the list page or dashboard again and confirm the record appears correctly. If reports do not update immediately, refresh the page and check that filters are set correctly.

9. FLOWCHART: ADD A NEW CUSTOMER

Simple customer creation flow

SEQUENCE DIAGRAM

HOW TO READ THIS FLOW

This diagram shows the normal order of work for t: Add a New Customer. Start from the first box, complete that action, then move to the next box. If any required information is missing, stop and correct it before moving forward.

WHAT TO CHECK BEFORE FINISHING

Make sure the record is saved, the status is correct, the right person owns the next action, and the customer or employee details are easy to find later. If something looks wrong, edit the original record instead of creating a duplicate.

WHO SHOULD USE THIS

Sales users, service users, payroll users, managers, and admins can use these diagrams as a quick checklist while training new team members or reviewing daily work.

DAILY MASTER DATA CHECK

01
Search existing record

02
Enter clean details

03
Save and reuse

Correct name

Contact details

Owner/status

Master

>

Transaction

>

Report

QUICK EXPLANATION

Good master data makes quotations, invoices, reports, and service records easier to use.

START

Begin t: Add a New Customer only when the source record is clear and complete. For example, choose the correct customer, employee, product, or ticket before moving ahead.

CHECK

At each step, check the required fields and the status. If the system shows a warning, fix it first instead of skipping the step.

FINISH

Save the record and confirm the next user can see it. The work is complete only when the status, owner, and notes are correct.

Manage people connected to customers

Contacts are individual people such as buyers, decision makers, accounts staff, or service contacts. They help teams call, email, and follow up with the right person.

Open Master > Contacts. Add the person name, phone, email, company, and role. Link the contact to the correct customer where possible.

Use real names and clear job titles. Mark old numbers or emails as updated instead of keeping wrong details.

Users can quickly find who to contact for sales, service, billing, or support.

Open the list page or dashboard again and confirm the record appears correctly. If reports do not update immediately, refresh the page and check that filters are set correctly.

Maintain item and service records

Products store item names, codes, categories, prices, vendor links, and other details used in quotations, invoices, planning, and reports.

Open Master > Products. Add or edit product details. Check category, price, tax, vendor, and active status. Save and test by searching the product.

Use one product code for one item. Do not create a new product just to change a price; update price records where applicable.

Users can select the correct product while making quotations, invoices, and plans.

```
graph LR; A[BEFORE SAVING] --> B[DAILY HABIT]; B --> C[AFTER SAVING];
```

BEFORE SAVING

Check the important fields for Products: name, date, customer or employee, amount, status, owner, and any notes or attachments. A quick check prevents rework later.

DAILY HABIT

Keep statuses updated, add clear notes, and avoid duplicate records. If you are not sure which screen to use, check the menu name and ask your manager before changing old data.

AFTER SAVING

Open the list page or dashboard again and confirm the record appears correctly. If reports do not update immediately, refresh the page and check that filters are set correctly.

12. MGR AND ATTRIBUTES

Group products and add product details

Section: Introduction & CRM
DocRef: UM-12

WHAT THIS SCREEN IS FOR

MGR and Attributes help classify products. MGR is used for grouping. Attributes are details like size, material, type, model, or other product features.

HOW TO USE IT

Open Master > MGRs to manage product groups. Open Master > Attributes to define extra product details. Link attributes carefully so users see the right options.

GOOD WORKING HABIT

Keep names short and meaningful. Avoid duplicate attribute names with slightly different spelling.

EXPECTED RESULT

Products become easier to search, filter, quote, and report.

FINISH
Save the record and confirm the next user can see it. The work is complete only when the status, owner, and notes are correct.

14. TERMS AND TERRITORIES

Set common terms and sales areas

WHAT THIS SCREEN IS FOR

Terms store common text used in quotations or documents. Territories help divide customers or sales responsibility by area.

HOW TO USE IT

Open Master > Terms to add payment, warranty, or delivery terms. Open Master > Territories to create sales areas and assign users. Use clear names that teams can understand.

GOOD WORKING HABIT

Review terms before using them in customer documents. Keep territory assignments updated when team members change.

EXPECTED RESULT

Quotations and customer ownership become more consistent.

DAILY HABIT

Keep statuses updated, add clear notes, and avoid duplicate records. If you are not sure which screen to use, check the menu name and ask your manager before changing old data.

AFTER SAVING

Open the list page or dashboard again and confirm the record appears correctly. If reports do not update immediately, refresh the page and check that filters are set correctly.

15. ENQUIRY REGISTER

Track customer enquiries

WHAT THIS SCREEN IS FOR

The Enquiry Register stores incoming customer interest from phone, email, website, visits, or referrals. It helps sales teams track new opportunities.

HOW TO USE IT

Open Enquiry > Enquiry Register. Search, filter, and review open enquiries. Open an enquiry to update status, requirement, follow-up date, or notes.

GOOD WORKING HABIT

Enter enquiries as soon as possible. Use clear requirement notes so another person can continue the conversation.

EXPECTED RESULT

No customer enquiry is missed, and managers can see enquiry progress.

DAILY HABIT

Keep statuses updated, add clear notes, and avoid duplicate records. If you are not sure which screen to use, check the menu name and ask your manager before changing old data.

AFTER SAVING

Open the list page or dashboard again and confirm the record appears correctly. If reports do not update immediately, refresh the page and check that filters are set correctly.

16. CREATE OR EDIT ENQUIRY

Record customer needs clearly

WHAT THIS SCREEN IS FOR

Use Create Enquiry to capture customer name, contact person, requirement, source, expected value, stage, owner, and next follow-up.

HOW TO USE IT

Click New Enquiry. Select or add the customer. Enter requirement and expected date. Assign owner and save. Update the enquiry after every call or meeting.

GOOD WORKING HABIT

Do not leave follow-up date blank. Write notes that explain what the customer wants and what was promised.

EXPECTED RESULT

The sales team has a clear next action for every enquiry.

FINISH
Save the record and confirm the next user can see it. The work is complete only when the status, owner, and notes are correct.

WHAT THIS SCREEN IS FOR

Analytics helps managers see enquiry count, source, status, conversion, and team performance.

HOW TO USE IT

Open Enquiry > Analytics. Select date range or filters. Review charts and lists. Use insights to follow up delayed enquiries.

GOOD WORKING HABIT

Check filters before reading numbers. Compare current period with previous period for a better view.

EXPECTED RESULT

Managers know which enquiries need attention and which sources are working best.

Open the list page or dashboard again and confirm the record appears correctly. If reports do not update immediately, refresh the page and check that filters are set correctly.

19. APPOINTMENTS

Plan meetings and visits

WHAT THIS SCREEN IS FOR

Appointments help teams schedule customer meetings, calls, demos, and follow-up visits.

HOW TO USE IT

Open Appointments. Create a new appointment with customer, date, time, owner, and purpose. After the meeting, update notes and next action.

GOOD WORKING HABIT

Keep meeting outcomes short and useful. Do not delete old meetings if they explain customer history.

EXPECTED RESULT

Everyone can see planned and completed customer interactions.

Open the list page or dashboard again and confirm the record appears correctly. If reports do not update immediately, refresh the page and check that filters are set correctly.

20. SALES DASHBOARD

Review sales work quickly

WHAT THIS SCREEN IS FOR

The Sales Dashboard gives a quick view of pipeline value, open deals, targets, activities, and team progress.

HOW TO USE IT

Open Sales Pipeline > Sales Dashboard. Review the summary cards. Check charts for delayed or important items. Open the related list for action.

GOOD WORKING HABIT

Use the dashboard at the start of the day. Do not treat dashboard numbers as final until filters are checked.

EXPECTED RESULT

Sales users and managers know what needs attention first.

WHAT THIS SCREEN IS FOR

The Deals Board shows opportunities in stages such as discovery, proposal, negotiation, won, or lost. It helps users move work step by step.

HOW TO USE IT

Open Sales Pipeline > Deals. Create or open a deal. Update value, stage, owner, expected close date, and notes. Move the deal only when the stage is truly complete.

GOOD WORKING HABIT

Keep close dates realistic. Add notes after every important customer conversation.

EXPECTED RESULT

The sales pipeline shows the real status of active opportunities.

22. FLOWCHART: DEAL FOLLOW-UP

Keep deals moving

Section: Flowchart Diagram
DocRef: FC-22

SEQUENCE DIAGRAM

HOW TO READ THIS FLOW

This diagram shows the normal order of work for rt: Deal Follow-up. Start from the first box, complete that action, then move to the next box. If any required information is missing, stop and correct it before moving forward.

WHAT TO CHECK BEFORE FINISHING

Make sure the record is saved, the status is correct, the right person owns the next action, and the customer or employee details are easy to find later. If something looks wrong, edit the original record instead of creating a duplicate.

WHO SHOULD USE THIS

Sales users, service users, payroll users, managers, and admins can use these diagrams as a quick checklist while training new team members or reviewing daily work.

WHAT THIS SCREEN IS FOR

Sales Pipelines define the stages used on the Deals Board. Admins or managers can create stages that match the company sales process.

HOW TO USE IT

Open Sales Pipeline > Pipelines. Create or edit pipeline stages. Keep stage names simple and in the correct order.

GOOD WORKING HABIT

Too many stages make daily use difficult. Change stages carefully because reports depend on them.

EXPECTED RESULT

All sales users follow the same process and reports become easier to read.

24. FORECASTING AND TARGETS

Plan expected sales and goals

WHAT THIS SCREEN IS FOR

Forecasting shows expected revenue. Targets show planned sales goals for users, teams, or periods.

HOW TO USE IT

Open Forecasting to review expected revenue. Open Targets to set or review sales goals. Compare target, forecast, and actual work regularly.

GOOD WORKING HABIT

Update deal values and close dates before reviewing forecast. Targets should be reviewed with the team.

EXPECTED RESULT

Managers can see whether the sales team is on track.

See calls, meetings, and actions

Sales Activities brings together follow-ups, calls, meetings, and deal notes so managers can review work history.

Open Sales Pipeline > Activities. Filter by user, customer, date, or deal. Review pending and completed actions.

Record activities soon after they happen. Use clear notes so managers understand the status without asking again.

The team has a shared history of customer communication.

SALES FOLLOW-UP VIEW

The diagram illustrates the 'SALES FOLLOW-UP VIEW' process. It features three main steps in light blue boxes: 01 Create record, 02 Plan next action, and 03 Update result. Below these, three progress bars show the completion status of 'Follow-up date' (purple, ~70%), 'Deal value' (blue, ~50%), and 'Clear notes' (green, ~40%). A yellow box titled 'QUICK EXPLANATION' states: 'Sales screens work best when each enquiry or deal has a next action and a clear owner.' At the bottom, a flow shows three light purple boxes: 'Enquiry' > 'Deal' > 'Quotation'.

26. SALES REPORTS AND ANALYTICS

Review sales results

WHAT THIS SCREEN IS FOR

Reports and Analytics show pipeline movement, stuck deals, win/loss information, salesperson performance, and revenue trends.

HOW TO USE IT

Open Sales Reports or Sales Analytics. Choose filters such as date, user, stage, or pipeline. Export or discuss the results if needed.

GOOD WORKING HABIT

Always check filter dates before sharing numbers. Use reports to improve follow-up, not only to review past work.

EXPECTED RESULT

Managers get a clear view of team performance and problem areas.

Check the important fields for Sales Reports and Analytics: name, date, customer or employee, amount, status, owner, and any notes or attachments. A quick check prevents rework later.

DAILY HABIT

Keep statuses updated, add clear notes, and avoid duplicate records. If you are not sure which screen to use, check the menu name and ask your manager before changing old data.

AFTER SAVING

Open the list page or dashboard again and confirm the record appears correctly. If reports do not update immediately, refresh the page and check that filters are set correctly.

27. QUOTATIONS LIST

View and manage quotations

WHAT THIS SCREEN IS FOR

The Quotations list shows all saved quotations. Users can search, open, edit, finalize, or review quotation status.

HOW TO USE IT

Open Sales > Quotations. Search by customer, quotation number, status, or date. Open the quotation to view details or continue editing.

GOOD WORKING HABIT

Do not create a new quotation if an editable draft already exists. Check quotation status before sending to customer.

EXPECTED RESULT

All customer offers are easy to find and review.

29. FLOWCHART: QUOTATION TO INVOICE

From offer to billing

SEQUENCE DIAGRAM

HOW TO READ THIS FLOW

This diagram shows the normal order of work for rt: Quotation to Invoice. Start from the first box, complete that action, then move to the next box. If any required information is missing, stop and correct it before moving forward.

WHAT TO CHECK BEFORE FINISHING

Make sure the record is saved, the status is correct, the right person owns the next action, and the customer or employee details are easy to find later. If something looks wrong, edit the original record instead of creating a duplicate.

WHO SHOULD USE THIS

Sales users, service users, payroll users, managers, and admins can use these diagrams as a quick checklist while training new team members or reviewing daily work.

Invoice

QUICK EXPLANATION

Before sending any quotation or invoice, check customer, item, quantity, price, tax, and terms.

START

Begin rt: Quotation to Invoice only when the source record is clear and complete. For example, choose the correct customer, employee, product, or ticket before moving ahead.

CHECK

At each step, check the required fields and the status. If the system shows a warning, fix it first instead of skipping the step.

FINISH

Save the record and confirm the next user can see it. The work is complete only when the status, owner, and notes are correct.

Create outward invoice

Sales Invoices record billing to customers. They include customer details, products, quantities, tax, totals, and invoice status.

Open Sales > Create Invoice. Select customer and add items. Check tax and totals. Save and review the invoice.

Use correct customer billing details. Do not change finalized invoice values without approval.

The invoice is saved and can be viewed or printed when needed.

32. PRICE MANAGEMENT

Manage price books, discounts, and currency

Section: Commercials & CPQ
DocRef: UM-32

WHAT THIS SCREEN IS FOR

Price Management controls price books, pricing rules, discounts, promotions, and currency rates used in sales and quotations.

HOW TO USE IT

Open the required price management tab. Add or update prices and rules. Check dates, customer or region, and active status. Test pricing on a quotation when needed.

GOOD WORKING HABIT

Small price changes can affect many quotations. Keep expired promotions inactive.

EXPECTED RESULT

Users see the right price while preparing quotations and sales documents.

Open the list page or dashboard again and confirm the record appears correctly. If reports do not update immediately, refresh the page and check that filters are set correctly.

WHAT THIS SCREEN IS FOR

Guided Selling and Configurator screens help sales users select products based on customer needs, options, and pricing.

HOW TO USE IT

Open Sales CPQ > Guided Selling or Configurator. Answer customer requirement questions. Review suggested products or options. Use the result in quotation preparation.

GOOD WORKING HABIT

Confirm customer requirement before selecting options. Do not promise options that are not available in product setup.

EXPECTED RESULT

Sales users can prepare more accurate product suggestions.

Open the list page or dashboard again and confirm the record appears correctly. If reports do not update immediately, refresh the page and check that filters are set correctly.

Track confirmed business

DocRef: UM-36

Orders show confirmed customer work. Revenue Analytics helps managers understand sales value, trends, and revenue movement.

Open Sales > Orders to view or update orders. Open Revenue Analytics to review revenue by date, customer, product, or team. Use filters for accurate review.

Keep order status updated. Check source data before sharing revenue numbers.

Confirmed business and revenue trends are visible to the team.

Open the list page or dashboard again and confirm the record appears correctly. If reports do not update immediately, refresh the page and check that filters are set correctly.

37. PLANNING SCREEN

Enter and review revenue plan

WHAT THIS SCREEN IS FOR

Planning is used to prepare revenue plans by customer, product, month, status, and business group. It supports management review and forecasting.

HOW TO USE IT

Open Planning > Planning Screen. Select financial year and filters. Add or edit planning entries. Review totals and summary views.

GOOD WORKING HABIT

Enter customer and product carefully. Use the correct month and status. Avoid editing previous-year data unless you have permission.

EXPECTED RESULT

The company has a clear plan for expected revenue.

WHAT TO CHECK BEFORE FINISHING

Make sure the record is saved, the status is correct, the right person owns the next action, and the customer or employee details are easy to find later. If something looks wrong, edit the original record instead of creating a duplicate.

WHO SHOULD USE THIS

Sales users, service users, payroll users, managers, and admins can use these diagrams as a quick checklist while training new team members or reviewing daily work.

39. SIMULATIONS AND REPORTS

Test scenarios and export data

WHAT THIS SCREEN IS FOR

Simulations help test possible sales or planning changes. Reports give downloadable and reviewable data for management.

HOW TO USE IT

Open Simulations to try planned changes. Open Reports for summary or export. Use filters before downloading data.

GOOD WORKING HABIT

Do not treat simulation values as final data. Share reports with filter details so others understand the numbers.

EXPECTED RESULT

Managers can study possible outcomes and review actual records.

Open the list page or dashboard again and confirm the record appears correctly. If reports do not update immediately, refresh the page and check that filters are set correctly.

40. SETTINGS

Manage company and profile details

Section: Operations & HR
DocRef: UM-40

WHAT THIS SCREEN IS FOR

Settings stores company profile, address, bank details, signatory, default terms, and footer page content.

HOW TO USE IT

Open Settings. Update only the section you need. Save and check documents or footer pages if the change affects them.

GOOD WORKING HABIT

Company settings can appear on printed documents. Review spelling and bank details carefully.

EXPECTED RESULT

Documents and company information show correct details.

41. ADMIN AUTHORIZATION

Control who can access what

WHAT THIS SCREEN IS FOR

Authorization lets admins decide which roles can see and use each module.

HOW TO USE IT

Open Admin > Authorization. Select a role. Turn module permissions on or off. Save and ask the user to refresh or log in again.

GOOD WORKING HABIT

Give only the access a user needs. Review permissions when staff changes roles.

EXPECTED RESULT

Users see the correct menus and company data remains protected.

AFTER SAVING

Open the list page or dashboard again and confirm the record appears correctly. If reports do not update immediately, refresh the page and check that filters are set correctly.

42. PAYROLL EMPLOYEES

Maintain employee salary profiles

Section: Operations & HR
DocRef: UM-42

WHAT THIS SCREEN IS FOR

Payroll Employees stores employee personal details, job details, bank details, salary structure, and deductions.

HOW TO USE IT

Open Payroll > Employees. Add or edit employee profile. Enter salary components and deductions. Save and review before payroll run.

GOOD WORKING HABIT

Check PAN, Aadhaar, bank account, joining date, department, and designation. Salary changes should be reviewed before monthly payroll.

EXPECTED RESULT

Employee salary details are ready for payroll calculation.

DAILY HABIT
Keep statuses updated, add clear notes, and avoid duplicate records. If you are not sure which screen to use, check the menu name and ask your manager before changing old data.

AFTER SAVING
Open the list page or dashboard again and confirm the record appears correctly. If reports do not update immediately, refresh the page and check that filters are set correctly.

43. PAYROLL RUNS

Calculate salary for a month

WHAT THIS SCREEN IS FOR

Payroll Runs create monthly salary batches. Admins can calculate, review, lock, and approve payroll.

HOW TO USE IT

Open Payroll > Run Payroll. Create a run for the month. Calculate salary. Review employee summaries. Lock and approve only after checking.

GOOD WORKING HABIT

Do not approve before checking deductions and payments. Keep payroll settings updated before calculation.

EXPECTED RESULT

Monthly payroll is calculated and ready for payslips and payment records.

CHECK

At each step, check the required fields and the status. If the system shows a warning, fix it first instead of skipping the step.

FINISH

Save the record and confirm the next user can see it. The work is complete only when the status, owner, and notes are correct.

45. PAYROLL PAYMENTS AND PAYSLEIPS

Record salary payment and view slips

Section: Operations & HR
DocRef: UM-45

WHAT THIS SCREEN IS FOR

Payments records salary payment status, mode, date, and reference. Payslips let users view or issue salary slips.

HOW TO USE IT

Open Payroll > Payments to update payment details. Open Payroll > Payslips to view salary slips. Confirm payment status after salary is paid.

GOOD WORKING HABIT

Use correct transaction reference. Do not mark payment complete until money is actually processed.

EXPECTED RESULT

Salary payment records and payslips are clear and ready for review.

Open the list page or dashboard again and confirm the record appears correctly. If reports do not update immediately, refresh the page and check that filters are set correctly.

47. CUSTOMER SERVICE DASHBOARD

Review support work

Section: Operations & HR
DocRef: UM-47

WHAT THIS SCREEN IS FOR

The Customer Service dashboard shows ticket counts, service status, pending work, and service performance.

HOW TO USE IT

Open Customer Service > CSM Dashboard. Review open, pending, and closed work. Open related tickets or reports for details.

GOOD WORKING HABIT

Use the dashboard to start the service day. Follow up high priority tickets first.

EXPECTED RESULT

Service managers know which customer issues need attention.

Open the list page or dashboard again and confirm the record appears correctly. If reports do not update immediately, refresh the page and check that filters are set correctly.

48. SUPPORT TICKETS

Create and resolve customer issues

Section: Operations & HR
DocRef: UM-48

WHAT THIS SCREEN IS FOR

Tickets record customer complaints, service requests, priority, category, owner, status, and resolution notes.

HOW TO USE IT

Open Customer Service > Tickets Management. Create or open a ticket. Add customer, issue, priority, category, owner, and notes. Update status as work progresses.

GOOD WORKING HABIT

Write the issue clearly. Add resolution notes before closing. Do not close a ticket until the customer issue is handled.

EXPECTED RESULT

Customer support work is traceable from creation to closure.
