3. CHAPTER 1: INTRODUCTION TO ARCRM

System Concept and Global Tenant Isolation

Section: Introduction & CRM
DocRef: UM-3

WELCOME TO ARCRM

ARCRM is an integrated corporate management platform tailored for enterprise resource planning, customer relationship management, sales configure-price-quote (CPQ) cycles, field customer service management, and salary payroll calculations. By integrating these systems, ARCRM provides cross-department data flows with full operational visibility.

TENANT ISOLATION GUARANTEE

The platform operates as a secure multi-tenant environment. When you log in, your profile is bounded to your company organization. Database calls are automatically filtered to your company context, preventing cross-tenant leakage. Managers can oversee all company records, while sales agents are locked to their respective territories.

4. CHAPTER 2: INTERFACE NAVIGATION

User Dashboard Layout and Page Controls

Section: Introduction & CRM
DocRef: UM-4

MAIN DASHBOARD INTERFACE

Upon authenticating, users view the Dashboard. The screen features a left navigation sidebar, a top application header, and the main workspaces. The sidebar groups related options together, such as CRM, Sales, CPQ, CSM, and Payroll.

MENU NAVIGATION

Hovering over sidebar items displays submenu flyouts. Key metrics (leads captured, open tickets, monthly sales volume) are featured in dashboard panels. Active layouts resize automatically to fit desktop, tablet, and mobile screens.

5. CHAPTER 3: USER ACCOUNTS

Managing Account Statuses, Roles, and Sessions

Section: Introduction & CRM
DocRef: UM-5

PROFILE CONFIGURATIONS

To update user details, navigate to Settings > Profile. Users can modify display names, update contact numbers, and view assigned security roles. User passwords can be updated under the security settings panel.

ASSIGNED USER ROLES

User roles control system permissions: Admin users manage system configurations; Managers oversee company sales and service queues; Sales reps create deals and quotes; Field engineers handle service visits. Account deactivations take effect immediately, revoking access tokens.

6. CHAPTER 4: TERRITORY MANAGEMENT

Configuring Geolocation Nodes and Assignments

Section: Introduction & CRM
DocRef: UM-6

TERRITORY SETUP

Territory nodes define sales boundaries. To configure territories, navigate to Masters > Territories. Admins can create regions by specifying country codes, state tags, cities, and pincode lists.

STAFF ASSIGNMENT

Managers assign sales reps and engineers to territories. When a client is onboarded, the system matches the addresses to these territories. If matches are found, it routes records to the assigned representative.

7. CHAPTER 5: ONBOARDING CUSTOMERS

Adding Customer Profiles and Handling Duplicates

Section: Introduction & CRM
DocRef: UM-7

CUSTOMER PROFILE ONBOARDING

To onboard a corporate customer, select Masters > Customers and click Add Customer. Enter the legal company name, billing addresses, shipping addresses, mobile contacts, and tax GSTIN numbers.

AUTOMATIC DUPLICATE CHECK

During entry, the platform verifies fields against existing records. If matches on GSTIN, email, or mobile are found, a warning displays, showing the existing profile link. This prevents duplicate profiles and keeps the directory clean.

8. CHAPTER 6: MANAGING CRM CONTACT PERSONS

Integrated Dropdowns and Designation Masters

Section: Introduction & CRM
DocRef: UM-8

■ ADDING CONTACT PERSONS

To record client personnel, go to CRM > Contacts. Replaced text inputs with interactive selections: the Company Name is chosen from registered clients, and the Designation dropdown lists standard titles.

■ INLINE QUICK ADD MODALS

If a designation is missing, click + Quick Add next to the selection. A modal opens where you can create, modify, or delete designations. Saving an entry selects it instantly, avoiding the need to exit the form.

9. CHAPTER 7: LOGGING LEADS & ENQUIRIES

Managing Marketing Enquiries and Routing

Section: Introduction & CRM
DocRef: UM-9

ENQUIRY REGISTRATIONS

Sales reps log inbound enquiries at CRM > Leads. Details include enquiry sources (e.g. Web portal, cold call, email), contact names, interest details, and products.

LEAD QUALIFICATIONS

Reps review interest levels and assign priorities. If qualified, click Convert to Deal. This action generates a deal record on the active Sales Pipeline Board and copies the customer profile details automatically.

10. CHAPTER 8: SCHEDULING CLIENT MEETINGS

Appointment Trackers and Activity Notes

Section: Introduction & CRM
DocRef: UM-10

BOOKING MEETINGS

To log interactions, select CRM > Meetings. Enter meeting titles, schedule dates, select attendees, and assign responsibilities. Scheduled meetings sync to representative calendars.

MEETING MINUTES

After meetings, reps edit the status to completed and log outcome summaries. These follow-up actions and notes feed into the customer's historical timeline.

11. CHAPTER 9: USING THE DEAL BOARD

Sales Stage Columns and Drag-and-Drop Operations

Section: Introduction & CRM
DocRef: UM-11

VISUAL DEAL BOARD

The Deal Board displays business opportunities categorized by stages. Columns track progress (e.g., Discovery, Proposal, Negotiation, Won, Lost) to show the overall pipeline.

CARD DRAG OPERATIONS

Drag opportunity cards across columns to update deal stages. Visual colors indicate deal health, alert flags indicate stuck deals, and potential values adjust dynamically.

12. CHAPTER 10: UNIFIED ACTIVITY TIMELINE

Logging Interactions and Document Histories

Section: Introduction & CRM
DocRef: UM-12

CHRONOLOGICAL STREAMS

Selecting a deal displays the Unified Activity Timeline, logging interactions (emails, phone call summaries, meetings, status changes, and quotes) chronologically.

ACTIVITY ENTRY LOGS

Reps can add custom activities (e.g., telephone note) and attach PDF specs. Timeline summaries ensure all team members stay aligned on client developments.

13. CHAPTER 11: SALES QUOTAS

Managers Setting Quota Targets and Rules

Section: Commercials & CPQ
DocRef: UM-13

TARGET ALLOCATIONS

To allocate quotas, managers navigate to Sales > Target Management. Targets can be defined by financial year and assigned to individual reps or regional territories.

QUOTA CATEGORIES

Targets support multiple performance metrics: total deal values, quotation counts, and product-specific volumes. These configurations drive sales team comparison metrics.

14. CHAPTER 12: SALES FORECASTS

Analyzing Pipeline Velocities and Achievements

Section: Commercials & CPQ
DocRef: UM-14

WEIGHTED PROJECTIONS

Sales Forecasting uses historical win rates and deal stage stages to project revenue. Projections are split by month to compare with actual wins.

PERFORMANCE RANKINGS

Analytics charts compare quota metrics with closed-won sales figures, highlighting top performers and warning of pipeline gaps.

15. CHAPTER 13: MANAGING PRODUCT CATALOG

Configuring Product Inventory and Pricing Models

Section: Commercials & CPQ
DocRef: UM-15

CATALOG REGISTRATIONS

To manage products, navigate to CPQ > Catalog. Products can be added with SKU codes, names, categories, standard base costs, tax rates, and default units (UOM).

PRODUCT MAINTENANCE

Deactivating items preserves historical records but hides them from simulators. Service bundles can be defined to group core products with support SLAs.

16. CHAPTER 14: PRICE BOOKS CONFIGURATION

Managing Base Matrices and Currency Conversions

Section: Commercials & CPQ
DocRef: UM-16

PRICE BOOK SETUP

To manage item prices, go to CPQ > Price Books. Price Books let you define price lists for specific target groups (e.g. Standard, Region-Specific, VIP Client).

FOREIGN CURRENCY CONVERSIONS

Price lists support alternative currency setups. When creating quotes, select the currency (e.g., USD, EUR) to convert standard prices using live currency matrices.

17. CHAPTER 15: PRICING RULES & PROMOS

Configuring Automatic Discounts and Promos

Section: Commercials & CPQ
DocRef: UM-17

DISCOUNT RULES SETUP

Pricing rules automate discounts. Managers set rules at CPQ > Pricing Rules, defining volume discount thresholds (e.g., buying 50+ units applies 5% off).

SCHEDULING RULES

Rules can be scheduled by date ranges to automate holiday promotions. The system evaluates and applies matching rules during quote creation.

18. CHAPTER 16: PRODUCT OPTION TEMPLATES

CPQ Option Selections and Configurator templates

Section: Commercials & CPQ
DocRef: UM-18

PRODUCT OPTION RULES

Product option templates manage complex component structures. To configure, navigate to CPQ > Option Templates and select a base product SKU.

ENFORCING SELECTIONS

Option groups define item bundles (e.g., choosing motor size requires matching enclosures). Selecting options adds predefined cost modifiers to the base rate.

19. CHAPTER 17: UTILIZING GUIDED SELLING SIMULATORS

Guided Product Filter sand Quotation Sandboxes

Section: Commercials & CPQ
DocRef: UM-19

GUIDED SELECTOR FLOWS

To use guided selling, select CPQ > Guided Selling. Reps complete questionnaires with client specifications (application type, budget limits) to filter the catalog.

QUOTE SIMULATION

Reps can adjust quantities and discounts in a simulation sandbox to preview margin metrics and taxes before saving quotes to client profiles.

20. CHAPTER 18: CREATING & EDITING QUOTATIONS

Draft Autosaves, Line items, and Customer Selects

Section: Commercials & CPQ
DocRef: UM-20

QUOTE CREATION STEPS

To create quotes, go to Sales > Quotations and click Create Quote. Select the onboarded Customer to load their billing data and territory details.

LINE ITEMS CONFIGURATION

Add products to the quotation table. Reps can choose configured options, apply manual discounts, set delivery locations, and view total calculations.

21. CHAPTER 19: UNDERSTANDING MARGIN PROTECTION RULES

Gross Margin Thresholds and Automated Block rules

Section: Commercials & CPQ
DocRef: UM-21

MARGIN CALCULATIONS

The Margin Protection Engine acts as a gatekeeper during quotation saves, calculating line margins based on standard costs and selling prices.

ENFORCEMENT THRESHOLDS

Negative margins are blocked by HTTP 400 responses. Sub-10% margins redirect the quote status to "Pending Approval", requiring manager sign-off before printing.

22. CHAPTER 20: REVISIONS, DRAFTS & VERSIONS

Autosave Recovery, Versions, and Lock terms

Section: Commercials & CPQ
DocRef: UM-22

AUTOSAVE RECOVERY

The system autosaves work-in-progress drafts to Redis every 30 seconds. If a connection drops, reps can restore their active session upon returning.

QUOTATION VERSIONS

Updating finalized quotes saves snapshots in the QuotationVersion history. Reps can compare revisions and restore previous quotation versions.

23. CHAPTER 21: SALES ORDERS & BILLING

Order Conversion, Invoicing, and Voucher Logs

Section: Commercials & CPQ
DocRef: UM-23

ORDER CONVERSIONS

Once approved, select Convert to Sales Order. This updates the quote status to ordered and locks pricing under customer agreement contract terms.

BILLING INVOICES

The conversion generates a printable invoice and logs transaction details to voucher tables, providing financial audits.

24. CHAPTER 22: CSM TICKET DESK OPERATIONS

Logging Support Tickets and SLA Priority tracking

Section: Operations & HR
DocRef: UM-24

SUPPORT TICKET INTAKE

To log support requests, navigate to CSM > Tickets. Support tickets register product details, customer serial numbers, and client descriptions.

SLA PRIORITY CLOCKS

SLA priority matrices assign response and resolution timelines. If a ticket is placed in "Pending Customer" status, the SLA timer is paused to prevent unfair breaches.

25. CHAPTER 23: WARRANTIES & AMC COVERAGE

Tracking Serial Numbers and Active Contracts

Section: Operations & HR
DocRef: UM-25

ENTITLEMENT VERIFICATION

When creating support tickets, the system checks the Product Serial Number. It queries active Warranty registers and AMC contracts.

STATUS ACTIONS

Active coverage sets the billing status to free. Inactive or expired coverage flags the ticket as billable, prompting the rep to link invoices or quotes.

26. CHAPTER 24: FIELD SERVICE VISITS CHECK-IN

GPS Verification and Visit Closures

Section: Operations & HR
DocRef: UM-26

SCHEDULING FIELD VISITS

Managers schedule service visits from tickets, assigning field engineers. Engineers receive dispatch details on mobile screens.

GPS LOCATION VERIFICATION

Engineers perform Check-In and Check-Out actions. The application captures the exact mobile GPS coordinates and timestamps, verifying engineer presence on-site.

27. CHAPTER 25: AUTHORIZING FAQS

Publishing Self-Service Knowledge Base articles

Section: Operations & HR
DocRef: UM-27

SELF-SERVICE INDEX

FAQ articles are cataloged by category (e.g., hardware, software). Reps use keywords to lookup troubleshooting articles directly from support tickets.

RESOLUTION LINKAGE

Closing support tickets allows referencing the resolving KB article, linking solutions to issues to improve future resolution times.

28. CHAPTER 26: EMPLOYEE STRUCTURE PROFILES

Payroll Profiles, salary templates, and allowances

Section: Operations & HR
DocRef: UM-28

EMPLOYEE SALARY PROFILES

Salary records map structural breakdowns for employees, detailing basic pay, HRA, allowances, professional taxes (PT), provident fund (PF), and deductions.

AUDIT LOGGING

Every modification to an employee's salary structure is logged in the PayrollAuditLog table, tracking user IDs, changes, and timestamps.

29. CHAPTER 27: PROCESSING MONTHLY PAYROLL

Run Batch Cycles, Slip Disbursements, and HR Letters

Section: Operations & HR
DocRef: UM-29

MONTHLY RUN STAGES

Processes payroll in structured phases: Run Created -> Calculated -> Locked -> Approved. Approved runs disburse net pay and payslips.

LETTER DOCUMENT GENERATOR

HR generates offer, appointment, promotion, and relieving letters dynamically from templates, automatically recording logs.

30. CHAPTER 28: STRATEGIC REVENUE PLANNING

Planners Budgets, Simulations, and Deployment PM2

Section: Operations & HR
DocRef: UM-30

REVENUE PLANNING WORKSPACE

Planners manage annual budgets. The planning screen compiles segment-wise and SBU-wise targets, allowing simulations and historical year modifications.

DEPLOYMENT PROCEDURES

Vite builds compile production client bundles. The Express backend is initiated using server scripts. PM2 or Docker is recommended for scaling production containers.
